

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

GENERAL INDEX

TO THE FIRST FOUR VOLUMES.

A

- ABERRATION of the Stars*, how to calculate it, Vol. IV. p. 51.
Accents, observations on, Vol. III. page 301.
Acer saccharinum described, Vol. III. p. 64—its sap a pleasant drink, 68, 69—method of making sugar from it, 67, 69—and compared with that of the West Indies, 71—virtues and various uses of the maple sugar and sap, 73. See *Sugar*.
Acid (vegetable) combined with marine salt, antiseptic virtues of, Vol. II. p. 284.
—— (*carbonic*) See *carbonic acid*.
—— (*nitric*) See *Nitric acid*.
Acids (sulphuric and muriatic) of the solution of iron in, Vol. IV. p. 457
Ad incorporating the A. Philo. Soc. Vol. II. p. xi.
Advertisements of the A. P. S. Vols. I. and IV. p. iii.
Affinities of letters, Vol. III. p. 292.
Ages of persons in America and Europe compared together, Vol. III. p. 43, 54, 56.
—— remarkable of certain persons, Vol. III. p. 44.
Agricultural essays, Vol. I. p. 118 to 224, 241, 255.
Agriculture the source of American prosperity, Vol. III. p. vii.
—— certain pursuits in, recommended, Vol. III. p. viii.
Air lighter than smoke, Vol. II. p. 2—how best conducted into chimnies, 8—advisable way of admitting it into rooms, 9—vulgar prejudices against, 21—whether moist or dry, its free circulation recommended, 21—night air not unwholesome, *ibid.*—unhealthy only when charged with putrid vapours, 22—curious current of in chimnies explained, and its uses suggested, 30—proved to be more humid in France and England than America, 53 to 55—purified by the willow tree, 209—resistence of, 296—its capability of extreme density, Vol. III. p. 64—on the evaporation of, 126—how affected by heat, Vol. I. p. 273—application of a machine for preserving its due temperature in hospitals, &c. 289—the seclusion of *air* requisite in preserving wine and cider, 184—Priestley's experiments and observations relating

- relating to the analysis of atmospherical air, Vol. IV. p. 1 to 11—experiments on the generation of air from water, *Ibid.* to p. 20.
- not less pure in towns than country, Vol. IV. p. 264.
- (sea and land) experiments on, Vol. IV. p. 262, 266, 269.
- (*rarified*) explained, Vol. II. p. 2.
- (*electric*) its capacity lessened by condensation, but increased by heat, Vol. II. p. 79.
- Air* (*phlogisticated*). See *Phlogisticated*.
- (*dephlogisticated*). See *Dephlogisticated*.
- (*foul*) how to expel it from wells, Vol. III. p. 324.
- (*sea*) thermometrical state of, Vol. III. p. 90, 200.
- (*fixed*) See *Carbonic acid*.
- (*atmospherical*) experiments and observations relating to the analysis of, Vol. IV. p. 1.
- (*nitrous*). See *Nitrous*.
- (*inflammable*). See *Inflammable*.
- Airs*, Experiments and observations on various, Vol. IV. p. 1 to 11, 128, 417, 452. See the *Gases*.
- Aldebaran* (*ocultation* of) as observed in the city of Washington in 1793, Vol. IV. p. 48.
- Alleghany mountain* (west of) the strata of stone lie horizontally, Vol. IV. p. 227.
- — — — — barometrical measurement of it, Vol. IV. p. 216.
- and Ohio rivers, &c. their fogs remarkably dense but not unwholesome, Vol. IV. p. 225.
- Alphabet*, how to form a universal one, Vol. III. p. 263—the imperfection of existing alphabets, 263, 266—a particular one constructed and recommended, 277.
- Alder tree*, agreeable food for silk worms, Vol. I. p. 226.
- America* (*North*) qualities of its winds, Vol. I. *Preface* p. xviii.—compared in places with China, Kamtschatka, &c. *ibid.*—observations on its vegetable kingdom, *pref.* *ibid.* p. 250—its grapes 192—its minerals, &c. *pref.* xxii. p. 251—the three bread colonies become very dry, 203—its general climate proper for the grape and making of wine, 117, 120—directions for the culture of the grape, 157—medicinal productions of 235, 239, 250, 257, 258, 260, 262, 263, 264, 265, 266. [See *Medicinal Productions*] change of climate in the middle colonies, 272—Indian population below the falls, Vol. IV. p. 252.
- antiquities of, Vol. III. p. 214—Vol. IV. p. 179, 181, 185, 196, 198, 203.
- , memoir on the discovery of, Vol. II. p. 263.
- bodily disorders common in, Vol. III. p. iii—on the duration of human life in, and the population of, 25—two births to one death there, 38—instances of longevity, 44—observations on the Western country of, 214—and on certain plants, and animals, 241.
- American Philosoph. Society*, its rules, Vols. I and IV. p. iii—laws and regulations, Vols. I and II. p. v. Vol. IV. p. iii—names of officers and members, Vol. I. p. xiii—Vol. II. p. xxiii—Vol. III. p. xxviii—Vol. IV. p. xiii—objects of the institution, *pref.* xiv.—act of incorporation, Vol.

- Vol. II. p. xi—deposits and annual subscriptions of its members increased by law, xvii—extracts concerning Magellan's donation, xix and Vol. IV. p. vii—donations received, Vol. II. p. 398—Vol. III. p. 351—Vol. IV. p. xvii—measures for improving inland navigation, Vol. II. p. 293, 295—reports made thereon, 294-5-6—premiums offered from out of the society's funds, Vol. IV. p. iv.—circular letter of the permanent committee for inquiring into the antiquities, &c. of North America, p. xxxvii.
- American Grapes*, observations on, Vol. I. p. 192—and on silk worms, p. 224.
- American Indians* long lived, Vol. III. p. 50—their ancient works, ib. p. 214—Vol. IV. p. 179, 181—their traditions, Vol. III. p. 216, 220 Vol. IV. p. 207, 209, 516—their dyes, Vol. III. p. 222—languages, customs, manners and genius, ib. p. 220—some account of former tribes, Vol. IV. p. 182.
- Americans*, their popular diet occasions certain diseases, Vol. III. p. vi.
- Atmospherical gas*, a portion of it in the atmosphere, Vol. IV. p. 128.
- Ambrosia*, memoir on, Vol. IV. p. 362.
- Amsterdam*, proportion of deaths there, Vol. III. p. 41, 59.
- Analysis* of the chalybeate waters of Bristol (Penn.) Vol. I. p. 303—their virtues, 306, 310, 313.
- of *atmospherical air*, experiments and observations relating thereto, Vol. IV. p. 1.
- Anatomy*, its utility, Vol. II. p. 366.
- Anatomical preparations*, the art of making them by injection and corrosion, Vol. II. p. 366—how prepared with wax, 381.
- Anchor (floating)* described and proposed to be used on a lee shore, Vol. II. p. 311.
- Anderson (Dr. James)* his disquisition on wool-bearing animals, Vol. IV. p. 149—his communication respecting a sheep brought from Jamaica, ib. p. 153.
- Anecdote* of a Roman cultivator of the grape, Vol. I. p. 121.
- Animal remains* discovered. See *Bones*,—*Mammoth*,—*Megatherium*.
- Animals* larger in the new than the old world, Vol. IV. p. 258.
- on the early condition of, Vol. IV. p. 503.
- Animate bodies* counteract atmospheric heat, Vol. II. p. 143.
- Anomaly (eccentric)* of the planets, mode of calculating it, Vol. IV. p. 67.
- Antil, Esq. (Edwd.)* his essay on the cultivation of the grape, and the making and preserving of wine in N. America, Vol. I. p. 117—his method of curing grapes for raisins, 193—of curing figs, 198—his observations on the raising and dressing of hemp, ib.
- Antiquities of America (Indian)* Vol. III. p. 214—Vol. IV. p. 179, 181, 184, 198.
- Apparatus* described for exhibiting the operations of smoke and rarefied air, Vol. II. p. 22.
- Apparent diameter* of an object, how to find it, Vol. I. p. 98—curious experiments attending it, ib.

Appendix to astronomical and mathematical papers, Vol. I. commencing after p. 116, to p. 72 of this appendix.

Apis Mellifica, or honey-bee, whether a native of America? Vol. III. p. 241.

Architects erroneous in their construction of fire places, Vol. II. p. 10.

Arcturus star, his great celerity of motion westward, Vol. II. p. 224.

Arsenic, an infallible test for detecting its presence, Vol. II. p. 214—the basis of Martin's cancer-powder, *ib.*—its efficacy in ulcerous cases, 215.

Asia (eastern side of) like the same latitudes in North America, Vol. I. *pref.* iii.

Astronomical and mathematical papers, Vol. I. from p. 1. to 116, with an appendix following.

———— calculations and corrections of, Vol. I. p. 39, 102.

———— instruments used in observing the transit of Venus at different places in 1769, Vol. I. p. 10, 13, 97, 106, 110, 114.

———— observations, Vol. II. p. 260—Vol. III. p. 150, 261—Vol. IV. p. 21, 32, 67.

Atmosphere, Venus surrounded by a dense one, Vol. I. p. 49—prodigious height of the Cometarian, and its supposed uses, appendix p. 35.

———— considered as to heat, Vol. I. p. 278—more moist in England and France than America, Vol. II. p. 53 to 55—density of it, 96—very moist and dense at the lakes, Vol. IV. p. 225—and charged with heavy but innoxious dews in interior America, *ib.*—queries as to its electrical state, Vol. I. p. 100—of Philadelphia, excessive heat of in 1750, with a curious fact from Dr. Franklin, 143—component parts of, Vol. IV. p. 266, 327, 417—changes in peculiar to America, 217.

———— (*a salubrious*) how compounded, Vol. IV. p. 128, 417.

———— at sea, the state of it, Vol. II. p. 90, 200—experiments on it, Vol. IV. p. 262, 269, 272—more pure than land air, 269.

———— of marshes, experiments and observations, Vol. IV. p. 417.

Atmospheric heat counteracted by animate bodies, Vol. II. p. 143.

Atmospherical air, Priestley's experiments and observations on the analysis of, Vol. IV. p. 1 to 11—whence compounded, 17—417, 424. See *Air*.

Attendant stars, numbers of discovered by Mayer, Vol. II. p. 222—useful for determining the motion of fixed stars, *ib.*

Attrition, why it causes heat, Vol. I. appendix, p. 32.

Aurora boreales, queries concerning, Vol. II. p. 100—an uncommon one, 136—always succeeded by a fall of the barometer, and generally by rain, 142—account of one, Vol. III. p. 62.

———— observations on, Vol. II. p. 196.

Axis of the earth, how to calculate its nutation, Vol. IV. p. 51.

Azote, or phlogisticated air, proportion between it and oxygen, as stated by some, Vol. IV. p. 1—not a simple substance—experiments and observations on, *ib.* p. 7, 11 and 382.

——, or nitrogen gas, what proportion of it in the atmosphere, Vol. IV. p. 128, 417.

Azotic gas, a component part of the atmosphere, Vol. IV. p. 266, 417.

Bailey

B

- Bailey (Joel)* and others, their account of Venus's transit over the sun in 1769, Vol. I. p. 89.
- Bark (red)* history of, Vol. II. p. 289.
- Barker's* mill improved, Vol. III. p. 144.
- as improved by James Rumsey, investigated as to its powers, p. 185.
- Barometrical* measurement of the Blue Ridge, Warm Spring, and Allegheny mountains in Virginia, Vol. IV. p. 216.
- Barton (Wm.)* on the duration of human life, and the progressive population of the United States, Vol. III. p. 25—his postscript to the foregoing, 134.
- (*Dr. Benj. Smith*) on the bite of the rattle snake, and the cure, Vol. III. p. 100—his inquiry, whether the true honey-bee is a native of America? 241—his botanical description of the podophyllum diphyllum of Linnæus, 334—his memoir concerning the fascinating faculty which has been ascribed to the rattle snake and other American serpents, Vol. IV. p. 74—his account of an American species of dipus, or jerboa, ib. p. 114—his observations and conjectures concerning certain articles which were taken out of an ancient tumulus or grave, at Cincinnati, in the county of Hamilton, and Territory of the U. S. north-west of the river Ohio, p. 181—his hints relative to the stimulant effects of camphor on vegetables, p. 232.
- Bartram (Moses)* his observations on the native silk-worm of N. America, Vol. I. p. 244.
- (*Isaac*) his memoir on the distillation of persimons, Vol. I. p. 231.
- Basalies* (crystallized) found in Pennsylvania, Vol. IV. p. 445.
- Battle of the Kegs.* See *Submarine vessel*.
- Bays* of Spirito Sancto (E. F.) of Mobile, St. Joseph, Pensacola, Sta. Rosa, Spirito Sancto and St. Andrew W. F.) described, Vol. I. p. 253.
- Bee (the honey)* observations on, Vol. III. p. 241—various species of, 245, originally from England, 256.
- *bive*, but one in West-Florida, Vol. III. p. 249.
- Bean*, a remarkable one used in the improvement of lands, Vol. III. p. 226.
- Bear*, a description from Indian tradition of a supposed huge terrific one, called the big naked bear, Vol. IV. p. 260.
- Beauvois (De)* his observations on plants called cryptogamic, Vol. III. p. 202.—His memoir on the subject of a new plant growing in Pennsylvania, Vol. IV. p. 173.—His memoir on a new species of firen, 277.—His memoir on amphibia, 362.
- Beccaria* and *Priestley*, their ideas concerning electricity, Vol. II. p. 76.
- Beer* (excellent) of persimons, Vol. I. p. 234.
- Belknap, (Jeremy)* his description of the white mountains in N. Hampshire, Vol. II. p. 42—his observations on the aurora borealis, as accompanied with a faint rustling noise, 196—his method to preserve parsnips, 199.
- Belly-ach*, how cured, Vol. II. p. 287.
- Benni-seed oil*, account of, Vol. I. p. 239—equal to Florence oil, ib.

- Berlin*, duration of human life at, Vol. III. p. 59.
- Biddle (Owen)* and others, their account of the transit of Venus in 1769, Vol. I. p. 89.
- Billings (Capt.)* thermometrical journal of the temperature of the air and water at sea, Vol. III. p. 200.
- Bilious* and *intermitting* fevers of Pennsylvania, inquiry into the cause of, with hints for preventing them, Vol. II. p. 206.
- Births* and deaths in certain places, proportion of, Vol. III. p. 30, 43, 54, 56, 59—proportion of, as to marriages, ib.
- in France and England compared, 35.
- Biscuit*, (signifying twice baked) the original name for rusk, Vol. II. p. 322.
- Black-lead*, a large bed of, Vol. I. *pref.* xii—the best point for metallic conductors, Vol. III. p. 322.
- Blaize-cape*, W. Florida, latitude of, Vol. I. p. 253.
- Block*, description of a newly-invented spring-block, for assisting vessels in sailing, Vol. III. p. 331.
- Blue boy*, some observations on a, Vol. IV. 138.
- Blue-ridge* in Virginia, barometrical measurement of it, Vol. IV. p. 216—formation of the country beyond, 246—nitrous caverns there, ib.
- Boats*, various modes of propelling, Vol. II. p. 307.
- Chinese, how rowed, ib.
- a new construction proposed for, 309—another designed for American inland navigation, Vol. IV. p. 298, 301.
- Boiquira* [*crotalus horridus*] See *Rattle snake*
- Bones* of a non-descript great clawed animal discovered in a nitrous cave in Virginia, Vol. IV. p. 246—of another at La Plata in Paraguay, p. 259—others found in Virginia, 439—observations on those of the Mammoth, 510—See *Mammoth bones*—Anatomical description of, p. 526.
- (Shark's) abundance of found fossil in Virginia, Vol. IV. p. 439.
- β *Bootes* and the pole star, right ascension and declination of, Vol. III. p. 116.
- Botanical* description of cryptogamic plants, Vol. III. p. 202.
- — — — — of the cassia chamæcrista, Vol. III. p. 228.
- — — — — of a poisonous plant, Vol. III. p. 234.
- — — — — of the podophyllum diphylum of Linnæus, Vol. III. p. 334.
- Botham* on the making of E. India sugar, Vol. III. p. 79.
- Bradley (John)* his account of the transit of Venus and eclipse of the sun, as observed in 1769 at Lizard point (G. B.), Vol. I. p. 114.
- Brass* and iron sooner tarnish and rust in woody than cleared land, Vol. IV. p. 226.
- Breast*, sugar useful in disorders of the, Vol. III. p. 75.
- Breslaw*, calculations of life there, Vol. III. p. 57.
- Bryant (William)* his account of an electrical eel, the torpedo of Surinam, Vol. II. p. 166.
- Bristol (Pennf.)* chalybeate waters of, Vol. I. p. 303—diseases cured or relieved thereby, 310.

- Britain*, why so named, Vol. IV. p. 506.
Britt (Daniel) his and Mr. Turner's thermometrical observations made at Fort Washington, Vol. IV. p. 330.
Buck-wheat blossoms coveted by bees, Vol. III. p. 258.
Buffon, his calculations on the duration of human life, Vol. III. p. 56—his supposed origin of planets, Vol. IV. p. 256—his opinion respecting the mammoth and its remains, 257.
Bugs, how to destroy them, and fleas and flies, Vol. I. p. 222.
Bull, of the zebu kind, described, Vol. IV. p. 151.
Burgundy-wine, what grapes preferable for making it in N. America, Vol. I. p. 126.
Burn-bones, smoke of destructive to insects, Vol. I. p. 222.
Bushnell (D.) his general principles and construction of a submarine vessel, invented by himself and communicated to Mr. Jefferson, while minister at Paris, Vol. IV. p. 303.
Butter, method of preserving, Vol. II. p. 31.

C

- Cables* and rigging of ships, proposed improvement in, Vol. II. p. 297.
Cadmus; or a treatise on the elements of written language, &c. with an essay on the mode of teaching the dumb to speak, Vol. III. p. 262.
Calculation of the transit of Venus over the sun in 1769, in N. lat. 40° and at Philadelphia, Vol. I. p. 5.
Campbell's-town (Pennf.) basalt discovered there, Vol. IV. p. 445.
Campbor, triturated with water, its stimulant effect on vegetables, Vol. IV. p. 232, 234—a more wholesome stimulant to plants than nitre, 235.
Canal proposed between Chesapeake bay and the Delaware, Vol. I. p. 293.
 — navigation, the enclined plane recommended, Vol. IV. p. 299—description of a new boat to be used in, 301.
Cancer, Dr. Martin's cure for, Vol. II. p. 212.
Cape-Henlopen, observations near it on the transit of Venus 1769, Vol. I. p. 89—lat. and lon. of the observatory and light-house there, 92, 96—courses and distance between them, 93.
 — *Cod*, its water cold, Vol. III. p. 84—extent and soundings of, 98.
 — *Blaize*, W. Florida, lat. of, Vol. I. p. 253.
 — *Henry (V.)* memoir on the sand-hills of, Vol. IV. p. 439—prevailing winds there, 440—its light-house described 442.
Carbonic acid gas, [fixed air] what proportion of it in the atmosphere, Vol. IV. p. 128, 266, 417—observations and experiments on its production, 469.
Carter (London) his observations concerning the fly weevil so destructive to wheat, Vol. I. p. 205.
Cascade, a curious one, Vol. II. p. 50.
Cassia Chamæcrisla, beneficial to worn-out, or poor lands, Vol. III. p. 226—botanical description of it, 228.
Castor-oil plants recommended for culture, Vol. I. p. 239.

- Catalogue* of foreign plants deserving attention in N. America, Vol. I. p. 325.
- Cataract* of Niagara described, Vol. III. p. 17—Vol. IV. p. 227 its true height, Vol. III. p. 23—and Vol. IV. p. 227—a singular appearance there explained, 229.
- Cattle* and horses fatten on sugar, Vol. III. p. 75.
- Cepede* (*De la*) his distribution of serpents into genera, Vol. IV. p. 379.
- Chalybeate waters*, analysis of the Bristol, Vol. I. p. 303—in what diseases recommended, 306, 310, 313.
- Charcoal*, a good conductor of electricity, &c. Vol. III. p. 324.
- , spirits of, its deadly effects proposed as a remedy against insects, Vol. I. p. 222.
- Chemical admixtures*, their effects in producing heat and cold, and the cause, appendix, Vol. I. p. 32.
- Chefapeak-bay*. See *Leaves*.
- Chimney* (*Staffordshire*) described, Vol. II. p. 25.
- Chimnies*, on the construction of, Vol. II. p. 1. causes of their smoking, 5, 10, 12, 13, 14, 15, 16, 17, 232—how to remedy it, 6, 11, 12, 14, 15, 16, 17, 18, 23, 232—a new mode of admitting air into them, 8—how to form their opening, 10, 11, 29—proportions of the funnels, 10, 11, 12—were not formerly used in England, 19—how constructed at Venice, 18—miscellaneous observations on, 35—sliding plates to, recommended, 13—and described, 25, 29—a curious current of air in them explained, Vol. II. p. 31—its uses, 30, 31, 32.
- China* resembles N. America, *preface*, Vol. I. p. iii.
- Chinese* economy as to fuel, Vol. II. p. 32—mode of warming the ground floors, 33.
- Cholic*, a cure for, Vol. I. p. 235, 312.
- Cicuta Venusa* described, Vol. III. p. 235—its deleterious quality, 237.
- Cinchona Caribæa Santa Lucie* described, Vol. II. p. 291—its virtues surpass Peruv. bark, *ib.*—another species described, 292.
- Cincinnati*, curious discoveries made in an Indian tumulus at, Vol. IV. p. 179—observations and conjectures concerning them, *ib.* p. 181—thermometrical observations made there, 330.
- Clays* in America, some account of valuable ones, *pref.* Vol. I. p. xi—a fine paint obtained from one, xii.
- Clearing and cultivating* a country, their opposite effects on the inhabitants, Vol. II. p. 207—the one to keep pace with the other, 209.
- Climate* of Ireland, its temperature, Vol. IV. p. 244—yearly quantity of rain there, *ib.*
- Climates* of N. America, observations on, Vol. I. p. 251, 272—Vol. III. p. vi. 43, 47, 51, 272—Vol. IV. p. 225—how they might be improved, 246,
- Clothing* worn by Americans defective in fashion and affects their health, Vol. III. p. vi.
- Clouds* (*electric*) how formed and operating, Vol. II. p. 88—their general course in America, 99.
- Coal* (*pit*) when first used in England, Vol. II. p. 19.

——neglected

- neglected by the French, 19, 20—used by the Chinese, 33—its smoke thought to be salubrious, 20—in kindling discharges much moisture, 54.
- Cocoons* of America larger than the Italian, and the silk stronger, but less fine, *preface* Vol. I. p. vi.
- Cold*, produced by admixture of certain bodies, Vol. I. *appendix* p. 32.
- Collin (Doctor Nicholas)* his essay, by way of introduction, on natural philosophy, Vol. III. page iii—his description of a machine invented by himself for saving persons from the upper stories of a house on fire, Vol. IV. p. 143—his philological view of some very ancient words in several languages, 476—his description of a speedy elevator 519.
- Comet* of June and July 1770, account of it by Mr. Rittenhouse, Vol. I. *appendix* p. 37—its uncommon velocity, *ib.* 46—smallness of size and short time visible, 37 to 46—its elements and motion, 38—method of computing its visible place and distance from the sun, *ib.* et 39—curious conjecture concerning comets, *ib.*—M. Messier discovers this comet in France, 41—his observations on it, *ib.*—discovered in England by Mr. Six, 44, with his observations on it, *ib.*—Lord Stirling's account of it, 45—observations on one lately discovered, Vol. II. p. 195—account of another, Vol. III. p. 261.
- Comets*, an essay on the use of, with conjectures on the origin of heat, Vol. I. *appendix* p. 27—have no light of their own, p. 28—their luminous trains accounted for, 29—their presumable temperature, *ib.*—Newton's opinion of comets, *ib.*—conceived the residence of intelligent beings, 30—immense height of their atmosphere, and its supposed use, 35.
- Committee* of husbandry's observations on the fly weevil, Vol. I. p. 218.
- Committees appointed by the A. P. S.* for observing the transit of Venus over the sun, Vol. I. p. 8, 44, 82, 89—of Mercury, 82.
- for reporting on the practicability of a canal between Delaware and Chesapeake, Vol. I. p. 293—their reports, 294, 295, 296.
- Compass (mariner's)* an easy method of finding its variation, Vol. II. p. 251—a proposed make-shift for the, 318—improvements on it, 396.
- Condensation* of electric air lessens its capacity, Vol. II. p. 79.
- Conductors* of lightning, an addition proposed to, Vol. III. p. 125—improvement on, 322.
- Conowaga hills* (Penns.) basaltic and granite found thereon, Vol. IV. p. 445.
- Connecticut*, longevity of its people, Vol. III. p. 39—deaths at Milford in, *ib.*
- Contents* of Vol. I. p. xxiii—of Vol. II. p. xxix—of Vol. III. p. xxxvi—of Vol. IV. p. xl.
- Copper (hardened)* in use among the Mexicans, the Greeks and Romans, Vol. IV. p. 200, 202—also the N. American Indians, 203.
- Country* compared with towns, as to number of deaths, Vol. III. p. 41.
- Cooke (John)* his description of a new standard for weights and measures, Vol. III. p. 328.
- Coombs (Thomas)* his meteorological observations made by him at Phila. 1770—1, Vol. I. *appendix* p. 70.

- Corrections* of astronomical calculations, Vol. I. p. 39, 102—of a mistake in the theory of mills, Vol. III. p. 144, and its importance exemplified, 147.
- Cortex ruber*, medical history of, Vol. II. p. 289—more efficacious than the common bark, 290—but inferior to the cinchona, 291.
- Cosmogony* of Buffon, Vol. IV. p. 256.
- Cotton-seed oil*, the quantity obtainable, Vol. I. p. 235—good for the cholic, ib.
- Courses* and distances from Norriton to Philadelphia observatory, and thence to Mason and Dixon's observ.—with their difference of lat. and long. Vol. I. *appendix* p. 6.
- — — between Cape Henlopen and the lighthouse Vol. I. p. 93.
- Coxe* (*Dr. John Redman*) his enquiry into the comparative effects of the opium officinarum extracted from the papaver somniferum, or white poppy, of Linnæus; and of that procured from the lactuca sativa, or common cultivated lettuce of the same author, Vol. IV. p. 388.
- Crotalus horridus*, or rattle-snake, on means to prevent the consequences of the bite of, Vol. III. p. 100—its poison counteracted, 102, 104, 109—reputed remedies against the bite of it, 114. Its fascinating power attempted to be disproved, Vol. IV. p. 74.—See *Rattle snake*.
- *miliaris* [ground rattle-snake] some account of, Vol. IV. p. 367.
- Cryptogamick plants*, observations on, Vol. III. p. 202.
- Curiosities* found at Cincinnati, Vol. IV. p. 179, 181.
- Current-wine*, receipt for making, Vol. I. p. 248.
- Currie* (*Dr. Wm.*) his inquiry into the causes of the insalubrity of flat and marshy situations; and directions for preventing or correcting the effects thereof, Vol. IV. p. 127.

D

- D'Aboville*, his account of a partridge with two hearts, Vol. II. p. 330.
- Dampness* in air or linnen not unwholesome, Vol. II. p. 21.
- Dan river* (N. C.) remains of a volcano there, Vol. III. p. 231.
- Data* respecting population, Vol. III. p. 28.
- Davidson* (*Dr. Geo.*) on the virtues of cinchona, Vol. II. p. 290.
- Dart-points*, vulgarly so called. See *Shark's teeth*.
- Deaths* and births in certain places compared, Vol. III. p. 30.
- Declination* and right ascension of β Bootes and the pole star, Vol. III. p. 116.
- Deflogificated* air, how produced, Vol. II. p. 209—in what case absorbed, Vol. IV. p. 1. See *Air*.
- Degeneracy* of certain vegetable productions when transplanted into different situations, Vol. I. p. 223.
- De Grauchain* (*Gen.*) on a solar and lunar eclipse in 1780, Vol. II. p. 239.
- Degree of latitude*, Mason and Dixon's measurement of a, Vol. I. p. 96.
- Deflogificated*

- Deflogificated air*, or *oxygen*, how produced, Vol. II. p. 209—Vol. IV. p. 2. when absorbed, Vol. IV. p. 1—observations and experiments concerning, Vol. IV. p. 1 to 11—proportion of it in the atmosphere, p. 417, *Delineations* and projections of the transit of Venus in 1769, Vol. I. p. 5, 27, 36, 59, 66.
- of Mercury, Vol. I. p. 8.
- Density* of the atmosphere, Vol. II. p. 96—description of at L. Erie, &c. Vol. IV. p. 225.
- Deveze* (*Dr. J.*) his essay on a new method of treating the effusion which collects under the skull after fractures of the head, Vol. IV. p. 433.
- Dews* in the Western country very heavy, but innoxious, Vol. IV. p. 225.
- Diameter* of the sun, Vol. I. p. 52, 79, 84, 101—*appendix* iv.—of Venus, *ib.*—of Mercury, *appendix*, 52.
- (apparent) of an object, how to ascertain it, Vol. I. p. 98—interesting experiments attending it, *ib.*
- Diabetes* with fever, how cured, Vol. II. p. 286.
- Diet* commonly used in the United States the cause of certain diseases, Vol. III. p. vi.
- Dipus*, or Jerboa, account of an American species of, Vol. IV. p. 114.
- Diseases* prevalent in N. America, Vol. III. p. iii.
- general causes of, Vol. III. p. vi.
- of marshy places, observations on, Vol. IV. p. 136.
- Distillation* of perfumons, memoir on the, Vol. I. p. 231.
- Donations* to the A. P. Soc. list of, Vol. II. p. 398—Vol. III. p. 351—Vol. IV. p. xvii.
- Dogs*, certain ones yield fine fleeces, Vol. IV. p. 151.
- Dress* (American) unappropriate to the climate, Vol. III. p. vi.
- Dublin*, proportion of deaths there, Vol. III. p. 59.
- Dumb*, mode of teaching such to speak, Vol. III. p. 310.
- Dyes* of the N. American Indians, account of some of the principal, Vol. III. p. 222—farther observations on, Vol. I. p. 255, 256, 261, 263.
- Dymond and Wales* observe the transit of Venus in 1769 at Hudson's bay, Vol. I. *appendix* p. iv.
- Dysentery*, a cure for, Vol. II. p. 285, 291.

E

- Earth* her distance from the sun, Vol. I. p. 62, 103—the Parisian hypothesis of the excentricity of her orb and distance from the sun, 103—Dr. Franklin's conjectures on the formation of, Vol. III. p. 1—his queries and conjectures relating to the theory of, *ib.* p. 10—how to calculate the nutation of her axis, Vol. IV. p. 32.
- , reflections on the early condition of the, Vol. IV. p. 503.
- Earthquakes*, Vol. I. p. 282, 285.
- Earths* (American) described, Vol. I. *pref.* p. xi.
- Earthy* substance, a curious one found at Niagara falls, Vol. III. p. 17.
- Easterly winds* in hot weather, their cause suggested, Vol. II. p. 91.
- Eclipse*, observations on a solar and lunar, Vol. II. p. 239.

- Eclipses* of Jupiter's satellites, Vol. I. p. 21, 55.
 — of the sun, Vol. I. p. 114—Vol. II. p. 250—of the moon, Vol. III. p. 150.
Earth's axis, how to calculate its nutation, Vol. IV. p. 51.
Eccentric anomaly of the planets, how to calculate it, Vol. IV. p. 67.
Edinburgh, proportion of deaths in, Vol. III. p. 40, 59.
Eel (*electrical*) or torpedo of Surinam described, Vol. II. p. 166.
 — (*torporific*) or numb-fish described, Vol. II. p. 170.
Effluvia, observations on, Vol. IV. p. 138.
Electricity, Priestly and Beccaria's ideas of, Vol. II. p. 76—cause of rain, 100.
Electric capacity, of air lessened by condensation, and enlarged by heat. Vol. II. p. 79.
 — clouds, how generated, formed and operating, Vol. II. p. 88
Electric fluid, how accumulated and discharged, Vol. II. p. 75.
 — in connection with water, compared by Dr. Franklin to water applied to a sponge, ib.—its effects on certain houses, Vol. III. p. 119—whether conducted by heat or its rarefying effect? p. 121—its effect on a house with conductors, p. 122—modes of conducting it, p. 125, 321—conducted by black-lead and charcoal, 323.
Electrical battery of Dr. Priestley described, Vol. II. p. 93.
 — *Eel*, or torpedo of Surinam described, Vol. II. p. 166.
Electricity, the cause of rain, Vol. II. p. 100.
Elevator (a speedy) for taking views, &c. a new invented machine, described, Vol. VI. p. 519 [*gained the Magellanic prize medal.*]
Ellicot (Andrew) on looming, Vol. III. p. 62.
 —, his letter on the right ascensions and declinations of β Bootes and the pole-star, p. 116—his letter on astronomical observations, and the theory and method of calculating the aberration of the stars, the nutation of the earth's axis, and the semi-annual equation, Vol. IV. p. 32—his method of calculating the eccentric anomaly of the planets, p. 67—his miscellaneous observations relative to the western parts of Pennsylvania, particularly those in the neighbourhood of L. Erié, p. 224—his observations made on the old French fort at Presqu'isle to determine the latitude of the town of Erié, p. 231—his observations for determining the lat. and lon. of the town of Natchez, p. 447.
Elliptical orbit, how to determine the true place of a planet in an, Vol. IV. p. 21.
Emeralds, very common among the Mexicans, Vol. IV. p. 199.
Emphasis, observations on, Vol. III. p. 304.
England, formerly without chimnies, Vol. II. p. 19.
 —, the use of pit-coal introduced into, ib.—her atmosphere moister than that of N. America, p. 55—and cabinet works there unsuitable to American air, ib.—proportion of births in, Vol. III. p. 35, 57, 59—climate of, p. 52.
English language, a table of all its distinct sounds, Vol. III. p. 292.
Equation (*semi-annual*) how to calculate it, Vol. IV. p. 51.

- Erié* (Lake) miscellaneous observations concerning it and parts adjacent, Vol. IV. p. 224—various phenomena attending it, *ib.*—the winds why like W. India breezes, *ib.*—the flux and reflux of water in the lake accounted for, and the idea of a tide refuted, 225—heavy dews and fogs there, *ib.*—the Southern shores described, 226—romantic cascades there; and slate and excellent free-stone; all the strata of stone horizontally disposed, *ib.*—an erroneous opinion refuted concerning this disposition, 227—singular appearance of the lake rocks; the falls of Niagara described, *ib.*
- town of, its lat. determined, Vol. IV. p. 231—magnetic variation there in 1795, p. 232.
- Errata* (for tables of) Vol. I. see the page before “The contents,” and also p. 39, 81, 116, and the head of this index—of Vol. III. *ib.* and p. xl.—of Wm. Barton’s paper [p. 25,] on the duration of human life, Vol. III. p. 134.
- Espaliers*, method of managing vines for. See *Vines*.
- Essay* on those enquiries in natural philosophy which at present are most beneficial to the U. States, Vol. III. p. iii.
- tending to improve intelligible signals and to discover a universal language, Vol. IV. p. 162.
- Europe*, proportion of inhabitants there under 16 years, Vol. III. p. 43— all the observations made there on the transit of Venus collected into one view, *appendix* Vol. I. p. 12.
- Evaporation*, experiments on, Vol. II. p. 118—do. Vol. IV. p. 72, 246.
- the best method of drying up marshes Vol. IV. 243—remarkable instance of it in England, 245.
- (spontaneous) of sugar-maple sap, produces sugar, Vol. III. p. 69.
- in cold air, experiments on, Vol. III. p. 125.
- Ewing* (Rev. John) his projection of the transit of Venus, Vol. I. p. 5— his account of the observations on it, p. 42, 66, and of the transit of Mercury, 82—his improvement of Godfrey’s quadrant, *appendix* p. 126.
- Experiments* on evaporation in cold air, Vol. III. p. 125.
- and observations relating to the analysis of atmospherical air, Vol. IV. p. 1, 417.
- Eye*, worm in a horse’s, Vol. II. p. 183.
- snake in a horse’s, Vol. II. p. 385.

F

- Falls* of Niagara account of, Vol. III. p. 17—Vol. IV. p. 227—their height, Vol. III. p. 23 and Vol. IV. p. 229—a singular appearance there now first explained, *ib.*
- of rivers in the Atlantic states, the ground below them of Neptunian origin, Vol. IV. p. 439, 444.
- Fascinating* faculty of serpents, attempted to be disproved, Vol. IV. p. 74— observations on the, p. 363, 370. See *Rattle-snake*.
- Fenwick’s* Isle. See *Lewes*.
- Fermentation*, why it excites heat, *appendix* Vol. I. p. 34.
- of wine, observations on it, Vol. I. p. 174, &c.

- Fevers* in Pennsylvania, bilious and intermitting, with hints for preventing them, Vol. II. p. 206—how cured, 290.
- Figs*, method of curing, Vol. I. p. 198.
- Files*, description of a machine for cutting, Vol. I. p. 300—its superiority, 302.
- Finery cinder* [scales of iron] observations on, Vol. IV. p. 466.
- Fire*, a machine to save persons from, Vol. IV. p. 143—others, p. 143, 519.
- Fire-places*, how to be constructed, Vol. II. p. 10. See *Stoves*.
- (Staffordshire) described, Vol. II. p. 25—mischief of large ones, 35—a most ingenious one for warming several rooms described, 36.
- Fish*, their characters as given by Vicq, D'Azir and D'Aubenton, Vol. IV. p. 280.
- Fishes* falling with rain, accounted for, Vol. II. p. 117.
- experiments on the animal heat of, Vol. III. p. 98.
- Fixed air*. See *Carbonic acid gas*.
- Flagg* (Henry Collins) his observations on the numb fish or torporific eel, Vol. II. p. 170.
- Floating anchor* recommended against a lee shore, Vol. II. p. 311.
- Florida* (West) letter concerning, Vol. I. p. 250—natural products, ib.—account of its climate, 251, Vol. III. p. 48—gulf of Mexico, 252.
- *Indians* acquainted with tin, Vol. IV. p. 202.
- (East) some account of its climate, Vol. III. p. 48.
- Fluids*, nature and properties of, Vol. II. p. 104.
- Fly-weevil* destructive to wheat, observations on it, Vol. I. p. 205—further observations, 218.
- Fogs* remarkably dense but innocuous on the rivers Ohio and Alleghany, Vol. IV. p. 225.
- Foreign* plants deserving attention in N. America, catalogue of, Vol. I. p. 255.
- Fortifications* (remains of Indian) Vol. III. p. 215, Vol. IV. p. 178.
- Fossil* shells and bones, numerous in the western country, Vol. III. p. 218—and elsewhere in America, Vol. IV. p. 439, 444. See *Bones*, *Oyster*, *Shark*.
- Fractions* of the skull, a new method of treating them, Vol. IV. p. 439.
- France*, air of, moister than that of America, Vol. II. p. 55—population, &c. of, Vol. III. p. 32—proportion of births and deaths in, 36, 41, 59.
- Franklin* (Dr. Benj.) letter from him on chimnies, Vol. II. p. 1—his love of fresh air; sleeps with open window; holds night air, moist air, and damp linen as not unwholesome, 21—proposes an apparatus for lecturing on smoke and rarefied air, 22—makes smoke descend, and describes a stove of his invention, 24—discovers a curious property of chimnies in summer; its utility and cause explained, 30—his letter to Mr. Nairne on hygrometers; with interesting facts concerning the state of the atmosphere in England, France and N. America, 51—his description of a new stove that consumes its smoke, 57—his interesting letter to Alphonfus Le Roy, concerning maritime observations, &c. 294—his observations on the warmth of sea-water in the gulph stream, &c. 325, 326,

326, 327—his journal of a voyage from France to America, 328—offers a new construction for boats, 309—on the formation of the earth, Vol. III. p. 1—his new theory of light and heat, 5—his communication of the Chinese manner of making certain paper, 8—on magnetism and the theory of the earth, 10—describes a curious phenomenon, 14.

Free-stone (excellent) on L. Erie, Vol. IV. p. 226.

Frogs, falling with rain, accounted for, Vol. II. p. 117—experiments with opium upon, Vol. IV. p. 398.

Frost and snow less in America than formerly, Vol. I. p. 275—its frequency in Pennsylvania, Vol. III. p. 52—its action applied to making maple sugar, 69.

Fruification of plants, organs of, Vol. III. p. 209. See *Plants*.

Fruits and pulse, their nature changed by transplantation, Vol. I. p. 224.

Fuel, advantages of, when plentiful and cheap, Vol. II. p. 26—means of saving it, 29, 33, 34, 35, 36, 67.

Furnaces, a machine to regulate the heat of, Vol. I. p. 286.

G

<i>Gas</i> (azotic)	} Experiments and observa-
— (carbonic acid)	
— (nitrous)	
— (hydrogen)	
— (ammoniacal)	

tions on, Vol. IV. p. 1,
17, 417, to 428.

Gassendus first discovers Mercury on the sun's disc, Vol. I. *appendix* p. 53.

Georgia, its climate, Vol. III. p. 49—proportion of deaths at Savannah, 59.

Germany, proportion of deaths in, Vol. III. p. 41, 59.

Gilpin (John) on the annual passage of herrings, Vol. II. p. 236.

Glasses, (smoked) belt to defend the sight, Vol. I. p. 106.

Goats yielding fleeces of fine wool, Vol. IV. p. 151.

Godfrey's quadrant, an improvement of, Vol. I. *appendix* p. 21.

Golden cassia described, Vol. III. p. 228.

Granite (crystallized) found on the Conewago hills (Penns.) Vol. IV. p. 445.

Grapes (wild) abundant in N. America, *pref.* ix—their culture recommended, *ib.*—different kinds described, 192—anecdote of a Roman cultivator of, Vol. I. p. 121—how to obtain the best wine from, 125—the kinds suitable to N. America, 126—American sorts described, 191—how to gather and make wine of them, 171—white do. 172—red do. 175—how to make raisins, 193—curious instances of the effects of transplanting them, 222. See *Vines*.

Grashoppers, artfully made use of by the nine-killer, as a bait to entrap small birds as prey, Vol. IV. p. 124.

Graves (Indian) accounts of, Vol. IV. p. 179, 181, 203, 205.

Great-Britain, observations there on the transit of Venus, Vol. I. p. 105, 114.

Great-bone-lick in Kentucky, remarkable appearances at, Vol. IV. p. 517.

Great claw, or megalonyx. See *Bones*.

Greenwich observatory (G. B.) observations there on the transit of Venus in 1769, Vol. I. p. 105.

Greenway

- Greenway* (*Dr.*) his account of the beneficial effects of cassia chamæcrista on worn-out or poor lands, Vol. III. p. 226—his communication on a supposed volcano in N. Carolina, 223—his account of a poisonous plant in Virginia, 234.
- Grist-mills*, observations on, Vol. IV. p. 350.
- Grauchain* (*De*) on a solar and lunar eclipse observed in 1780, Vol. II. p. 239.
- Grotto* at Swatara in Pennf. described, Vol. II. p. 177.
- Ground-rattle-snake*, some account of the, Vol. IV. p. 367.
- Grub-worm*, how to preserve the vine from it, Vol. I. p. 164.
- Gulf stream*, observations on it, Vol. II. p. 314—its warmth, 325—Doctor Franklin's observations on it confirmed, Vol. III. p. 83. Further remarks on that stream, 86, 96, 194.
- Gum copal*, supposed to exude from a species of American sumach, Vol. I. *pref.* ix.
- Gums* (*viz.*) perfimon, Vol. I. p. 234.—mastick, 257—storax, *ib.*—scammony, *ib.*—dragon, 259, 264—copal, *pref.* ix, 262—senegal, 263—arabic, *ib.*—labdanum, 264—galbanum, *ib.*—opponax, *ib.*—myrrh, 265—benjamin, *ib.*—ammoniacum, *ib.*—assafœtida, 266.

H

- Hadley's quadrant*, an easy and accurate way to adjust the glasses of it, on land, for the back observation, Vol. IV. p. 154.
- Halley* (*Dr.*) errors in his tables, Vol. I. p. 102—observes a remarkable period in the planet Mercury's motion, *appendix* 53—first conceived the method of ascertaining the sun's parallax, 54.
- Hare and Skinner's* natural history of the silk-worm from the egg to the cocoon; with the mode of obtaining the silk, &c. Vol. II. p. 347.
- Harpfichords*, an improved method of quilling, Vol. II. p. 185, 190.
- Heart* (*Jonathan*) on American Indians and some ancient works, Vol. III. p. 214.
- Hearts*, two found in a partridge, Vol. II. p. 330.
- Heat*, concerning the origin of, Vol. I. *appendix* p. 32—different modes of exciting it, *ib.*—the effect of vibratory motion, *ib.*—its proportion regulated by the face of country, p. 273—the cause of most winds, *ib.*—whence best reflected, 275—description of a new machine for preserving an equal degree of, 286—its expansion of wood, Vol. IV. p. 29—enlarges the capacity of electric air, Vol. II. p. 79—the strongest attraction between it and water, 144—destroys magnetism, 180.
- and light, a curious theory of, Vol. III. p. 5—both deemed substances, Vol. IV. p. 11.
- Hebrew language*, observations on it, Vol. III. p. 264, 276.
- Heckewelder* (*Rev. John*) his account of the remarkable instinct of a bird called the nine-killer (*lanius excubitor*) Vol. IV. p. 124—his account of a supposed animal called by the Indians the big-naked-bear, Vol. IV. p. 260.

- Hemp (Indian)* how useful, Vol. I. *pref.* p. x—observations on the raising and dressing it, p. 198—wind and air injurious to hemp, 204—best method of preparing it, 203.
- Henlopen (Cape)* observations near it on the transit of Venus in 1769, Vol. I. p. 89, lat. and lon. of the Cape, 92, 96—courses and distance between the lighthouse and observatory there, 93.
- Henry (Wm.)* of Lancaster's description of a self-moving register for preserving an equal degree of heat, Vol. I. p. 286.
- (*Cape*) memoir on the sand-hills of, Vol. IV. p. 439—lighthouse described, 442.
- Herrings*, their annual passage, Vol. II. p. 236.
- the same in England and America, ib.
- Heterandra reneformis*, a new plant, described, Vol. IV. p. 173.
- Hieroglyphics*, supposed ones on the Ohio, &c. Vol. IV. p. 195.
- Higgins (Jesse)* his manner of draining ponds in level grounds, Vol. III. p. 325.
- Hog's lard* and tar, a preservative to grape vines, Vol. I. p. 164.
- Hollingsworth (Henry)* his method of destroying wild garlic, Vol. I. p. 241.
- Honey* paid in tribute to the Mexican sovereigns, Vol. III. p. 245.
- bee, an enquiry if originally a native of America, Vol. III. p. 241—various kinds of, 245.
- Hopkinson (Francis)* his description of a new machine for measuring a ship's way, Vol. III. p. 159—his account of a worm in a horse's eye, 183—his improved method of quilling harpichords, 185, 190—his description of a machine for measuring a ship's way, 239—his new invented spring-block described, 331 [*gained the Magellannic prize*]*—*his and Mr. Rittenhouse's account of the effects of lightning on a house with conductors, 122.
- Horse's eye*, a worm in it, Vol. II. p. 183—a living snake in it, 385.
- Horses* and cattle fattened on sugar, &c. Vol. III. p. 75.
- Hospitals*, a machine proposed for regulating the due temperature of their air, Vol. I. p. 289—on the construction of, Vol. III. p. 348.
- Hot-house*, a new way to heat it, Vol. II. p. 74.
- Houses* struck with lightning, account of, Vol. III. p. 119, 122—mode for their greater security suggested, 125.
- Hudson's bay*, observations on the transit of Venus there in 1769, Vol. I. *appendix* p. 1.
- Human life* in America, on the probable duration of, Vol. III. p. 25. 134.
- Humidity* of the air in England and France, Vol. II. p. 55.
- Hurricane*, description of a remarkable one in N. England, 1773, Vol. II. p. 136—conjectures as to its cause and origin, 139.
- , theory of, Vol. II. p. 343—of the same nature with tornadoes and windspouts, 345.
- common at lake Erie, Vol. III. p. 63.
- Hutchins (Thomas)* his description of a remarkable rock and cascade near Youghiogeny river, Pennsylvania, Vol. II. p. 50.
- Hydrargyrum vitriolatus flavus*. See *Turbith* mineral.
- Hydrogen gas*, or inflammable air, proportion of, in the atmosphere, Vol. IV. p. 128,

- p. 128, 417—its properties, *ib.*—origin of it in marsh air, 420—quantity of it afforded by charcoal and finery cinder, 464—from what other substances it may be obtained, 465.
Hydropholia cured in a young woman, Vol. II. p. 231.
Hygrometer, a new construction for it, Vol. II. p. 56.
Hypothesis (*Parisian*) of the eccentricity of the earth's orb and its distance from the sun, Vol. I. p. 103.

I

- Icelanders'* manner of warming their houses, Vol. II. p. 34.
Inclined planes, a capital improvement in canal navigation, and far superior to locks, Vol. IV. p. 299.
Index flora Lancastriensis, Vol. III. p. 157.
Indian antiquities of America described, Vol. III. p. 214—Vol. IV. p. 179, 181, 184, 198.
 — traditions, Vol. III. p. 216, 220, Vol. IV. p. 188, 260—dyes, Vol. III. p. 222—languages, customs, manners and genius, 220, Vol. IV. p. 190, 205—ancient monuments, Vol. III. p. 214, Vol. IV. p. 179, 181.
 — *corn*, originally the only grain of America, Vol. I. *pref.* p. iii.
 — *dart-points*. See *Shark's teeth*.
 — *hemp* deserving attention, Vol. I. *pref.* p. x.
Indians (*American*) long lived, Vol. III. p. 50, 51—traditions, 216, 220—languages, customs, manners and genius, *ib.*—some account of former tribes, Vol. IV. p. 183—superstitious veneration for certain birds, &c. p. 206.
 — population of, below the falls of rivers on the settlement of America, Vol. IV. p. 252.
 — sculpture, on a rock at Kenhawa, Vol. IV. p. 253.
Inflammable air, or phlogiston, observations on, Vol. IV. p. 2, &c.—may be produced from spirits of wine, *ib.* p. 19—its properties, *ib.* p. 130—proportion of it in the atmosphere, 7, 128, 417—whence formed, 420.
 — fluids, description of a proposed vessel for boiling them, Vol. IV. p. 431.
Inflammation, why an exciter of heat, Vol. I. *appendix* p. 34.
Inguana [*siren*] an intermediate class connecting the amphibæ with fish, Vol. IV. p. 277—a new species of it detected in Peale's museum, *ib.*—a scientific description of it, 279.
Inland navigation, proposed improvements in, Vol. I. p. 293.
Inscription (*curious*) near Naples, Vol. I. p. 285.
Insects, how to protect pulse and grain against, Vol. I. p. 222.
Instruments used in Pennsylvania for observing the transit of Venus at different places in 1769, Vol. I. p. 10, 13.
Introduction, being an essay on those enquiries in natural philosophy, which at present are most beneficial to the U. States, Vol. III. p. iii.
Ireland, its temperature of climate equable; yet seldom affords three months summer weather, Vol. IV. p. 244—quantity of rain sometimes there, *ib.*—its east winds produce epidemic inflammatory disorders, *ib.*

Iron very susceptible of rust, and brass soon tarnishes in the western country—and why, Vol. IV. p. 226—a portion contained in air, 327—of its solution in the diluted sulphuric and muriatic acids, 457—observations on finery cinder, or scales of, 466.

Italy, &c. why formerly colder than now, Vol. I. p. 276.

J

Jaw-fall of infants, species of tetanus, Vol. II. p. 236—how to prevent it, ib.

Jefferson (Thomas) his letter in answer to the A. P. Society's, on being chosen their president, Vol. IV. p. xii.—his letter on the height of certain mountains in Virginia, ib. p. 222—his memoir on the discovery of certain bones of a quadruped of the clawed kind in the western parts of Virginia, ib. p. 246; with a P. S. on the skeleton of the Paraguay megatherium, 259—his description of a mould-board of the least resistance, and of the easiest and most certain construction; taken from a letter to Sir John St. Clair, president of the Board of Agriculture at London, 313.

Jeffersonia binata, a new plant, Vol. III. p. 342.

Jerboa, account of an American, Vol. IV. p. 114.

Johnson (Dr.) his rule for pronunciation erroneous, Vol. III. p. 270.

Jones (Dr.) and D. Rittenhouse's account of houses struck with lightning, Vol. III. p. 119.

Journal of a voyage from France to America by Dr. Franklin, Vol. II. p. 328.

——— *s* (thermometrical) at sea, Vol. III. p. 90, 194.

Jupiter, eclipses of his satellites observed at Norriton, Vol. I. p. 21—at Philadelphia, 55.

——— his distance from the sun, Vol. I. p. 62.

——— (satellites of) their immersions and emersions as observed at Wilmington on the Delaware, and at the western observatory, for determining the western bounds of Pennsylvania in 1784, Vol. IV. p. 32—at Baltimore in 1788, ib. p. 48.

K

Kamischatka, similar to Labrador, but different from same latitudes in Europe, Vol. I. *pref.* p. iv.

Kenhawa river, a curiously sculptured rock there, Vol. IV. p. 252.

Kentucky, remarkable appearances at the Great-bone lick there, Vol. IV. p. 517.

Ketchup (India) how to make, Vol. I. p. 259.

King (Nicholas) his improvements in boats, &c. for river navigation, Vol. IV. p. 298.

LaBacca

L

- Laëuca fativa* [garden lettuce] yields good opium, Vol. IV. p. 391. See *Opium*.
- Lake Erié.* See *Erié*.
- Lakes*, subject to tempests, Vol. III. p. 63.
- Land*, when and why colder or warmer than water, Vol. I. p. 274.
- *spouts*, account of two, Vol. II. p. 112—of another formed first on the water, 115—curious effects of it, 116.
- *air*, experiments on, Vol. IV. p. 262, 266—less pure than sea-air, 269.
- Lands (poor)* good effects of cassia chamæchrista thereon, Vol. III. p. 226.
- Language (written)* an essay on, Vol. III. p. 262.
- (*a universal*) proposed, Vol. IV. p. 167.
- Languages*, two different ones used by the Natchez Indians, Vol. IV. p. 193—Dr. Collin's philological view of some very ancient words in several, Vol. IV. p. 476—mines of human antiquities, 478—comparative specimens of various languages, 485.
- Lanius excubitor*, or great shrike, some account of, Vol. IV. p. 124.
- Latitude* of Norriton observatory, Vol. I. p. 22.
- of Philadelphia, 54.
- of Lewes, 92.
- of Providence (N. E.) 103.
- of Newcastle court-house, 93.
- of lighthouse on Cape Henlopen, 93.
- of Cape Blaize (W. Flor.) 253.
- of Mobile bay, ib.
- of Santa Rosa, ib.
- of town of Erié, Vol. IV. p. 231.
- of the town of Natchez, Vol. IV. p. 449.
- La Plata*, account of a huge skeleton found there, Vol. IV. p. 259.
- Latrobe (B. Henry)* his memoir on the sand-hills of Cape Henry (Vir.) Vol. IV. p. 439—supplement thereto, 444.
- Lava* erupted from mount Vesuvius, Vol. I. p. 283, 285.
- Laws* and regulations of the Amer. Philos. Soc. Vol. I. p. v.—Vol. II. p. v.
- Law* to encrease the annual subscriptions and deposits of members of the A. P. S. Vol. II. p. xvii.
- Lee-shore*, a proposed contrivance to avoid it, Vol. II. p. 311.
- Lenxes* (two convex) invert objects, and why, Vol. II. p. 37—other curious appearances produced by them explained, 37 to 42.
- Leprosy* assigned as the cause of the dark complexion of Negroes, Vol. IV. p. 289.
- various kinds de cribed, Vol. IV. p. 289.
- Le Roy* on the construction of hospitals, Vol. III. p. 348.
- Letters*, new ones proposed, Vol. III. p. 277—their affinities, 292.
- Lettuce* [*lactuca fativa*] yields good opium. See *Opium*.
- Lewes* observatory, transit of Venus as observed there in 1769, Vol. I. p. 89—courses and distances from it to the provincial west line between Fenwick's

- Fenwick's ifle and Chelapeak bay, 91—alfo to lighthouse on Cape Henlopen, 93—its lat. and lon. 92, 96.
- Life (human)* on the probable duration of, Vol. III. p. 25, 134.
- Light and heat*, Franklin's new and curious theory of, Vol. III. p. 5—both are fubftances, Vol. IV. p. 11.
- Light of comets* proceeds from the fun, Vol. I. *appendix* p. 28.
- -- ——— altonifhing velocity of, *ib.* *appendix* 36.
- Light-houfe* on Cape Henlopen, its lat. and lon. Vol. I. p. 92, 96.
- ——— at Cape Henry (Vir.) defcribed, Vol. IV. p. 442—its ftair-cafe faulty, *ib.*
- Lightning* and thunder forms, theory of, Vol. II. p. 74.
- ——— account of houfes ftruck by, Vol. III. p. 119, 122—2, whether conducted by heat, or its rarefying effect? 121—how to guard fhips againft, Vol. II. p. 302.
- ——— *rods*, or conductors, an improvement propofed in the conftruction of, Vol. III. p. 125—another improvement, 321.
- Limufone*, intermixed with flint and marine petrifications on L. Erié, Vol. IV. p. 226.
- Lion*, dimenfions of a large one, as taken by M. de Buffon, Vol. IV. p. 248—a larger one ftill, prefumed to be a native of America, 252—its figure fupposed to be cut on a rock upon the Kenhawa, 253—prefumptive proofs of his exiftence, *ib.*—curious particulars concerning the lion, 254.
- Liriodendron tulipifera* [tulip-tree] how affected by camphor infufed in water, Vol. IV. p. 232.
- List* of the officers and members of A. P. S. Vol. I. p. xii.—Vol. II. p. xxiv.—Vol. III. p. xxviii.—Vol. IV. p. xiv.
- Lizard point* (G. B.) account of the tranfit of Venus and eclipfe of the fun, as obferved there in 1769, Vol. I. p. 114—longitude of, 116.
- Locked jaw*, preventive for, Vol. II. p. 228.
- Logarithm* of any number (*common*) Rittenhoufe's mode of rafing it immediately, Vol. IV. p. 69.
- London*, proportion of deaths in, Vol. III. p. 40—table of the duration of human life there, 57.
- Longevity*, comparative degrees of, Vol. III. p. 38—particular inftances of in the United States, 44—inftances elfewhere, 50.
- Longitude* of Philadelphia and Norriton obfervatories, Vol. I. p. 5, 59, 93, 96.
- ——— of Lewes, Vol. I. p. 92, 96.
- ——— of Providence (N. Eng.) and Cambridge (do.) Vol. I. p. 103.
- ——— of the Lizard point (G. B.) Vol. I. p. 116.
- ——— and latitude, meafurement of the difference of, between Philadelphia and Norriton obfervatories, Vol. I. *appendix* p. 5.
- ——— of the town of Natchez, Vol. IV. p. 451
- Looming*, obfervations on the phenomenon of, Vol. III. p. 62.
- Lorimer (Dr.)* his obfervations on W. Florida, Vol. I. p. 250.
- Lukens (John)* his account of the contacts in the tranfit of Venus over the fun, Vol. I. p. 28.
- Lunar eclipfe*, obfervations on one, Nov. 2d 1789, Vol. III. p. 150.

M

- Machine* for regulating the heat of furnaces and temperature of the air, Vol. I. p. 286—for pumping vessels at sea, without manual labour 289—for cutting files, 300.
- for measuring a ship's way, invented and described, Vol. III. p. 239.
- for saving persons from the upper stories of a house on fire, Vol. IV. p. 143.
- Madagascar sheep* described, Vol. IV. p. 149.
- Maize*, [zea] the only grain found by the first settlers in N. America, Vol. I. *pref.* p. iii.
- M. Caussin (Rob.)* his account of an earthy substance at Niagara; with remarks on the cataract there, Vol. III. p. 17.
- Madeira*, proportion of deaths in, Vol. III. p. 41, 59—encreasing population of, 43.
- Madison (Rev. J.)* his letter to D. Rittenhouse containing observations on the climate at Williamsburgh, Virginia, Vol. II. p. 141—his experiments and observations on the sweet-springs of Virginia, 197—his observations on a lunar eclipse and the transit of mercury over the sun, Nov. 1789, Vol. III. p. 150—his experiments on magnetism, Vol. IV. p. 323.
- Magellan (I. H. de)* his donation to the American Philosophical Society, Vol. II. p. xix.
- Magellanic prize*, how and in what cases to be awarded, Vol. II. p. xix—Vol. III. p. 336—on whom bestowed, p. 262, 321, 331. Vol. IV. p. 519.
- Magnetic variation* at the town of Erie in 1795, Vol. IV. p. 232.
- *needle (universal)* Vol. I. p. 54.
- Magetical observations much wanted in America*. Vol. I. p. 254.
- made at Cambridge (Massachusetts) Vol. III. p. 115.
- Magnetism*, experiments on, Vol. II. p. 178—Vol. IV. p. 324—destroyed by heat, 180—produced by friction of two pieces of steel against each other, ib.—how communicated to a soft steel ramrod, ib.—curious thoughts on, Vol. III. p. 3.
- and the theory of the earth, queries and conjectures concerning, Vol. III. p. 10.
- Magnolia* and spice-wood excellent in some diseases, Vol. I. *pref.* p. viii.
- Magotty-bay-bean* (cassia chamæchrista) an excellent manure, Vol. III. p. 226—botanical description of it, 228.
- Mammoth-bones*, Buffon's opinion of them, Vol. IV. p. 257—memoir concerning them, 510—whence their name, ib.—abundant beyond the mountains, and why, 511—a popular opinion concerning the animal rejected, ib.—the remains of more than one species of a huge non-descript, 512—observations as to the probable volume of the mammoth, 511—arguments against his now-existence, 516—Indian tradition respecting him, ib.—remarkable appearances at the great-bone-lick in Kentucky, 517—conjectures as to his nature and pursuits, ib.

Mankind,

- Munkind*, reflexions on the early state of, Vol. IV. p. 481.
- Manure* requisite to vineyards, Vol. I. p. 121—what kinds proper, 124, 128—how dispensed with by the poor, 124—how applied to vineyards, 160—a rich one, 161.
- Maple tree (Sugar)* supposed to be the arrack tree, Vol. I. *pref.* p. v—its sap yields a fine spirit, *ib.*—observations on, Vol. III. p. 64—its produce in sugar, 66, 69, 71, 73, 76—its sap a pleasant drink, 68—how useful otherwise, 73—how to make the sugar, 67—superior to that of the W. Indies, 71—virtues and uses, 74.
- Marble*, (*curious*) Vol. II. p. 50.
- Marine salt* and vegetable acid combined, their virtues in putrid disorders, Vol. II. p. 284.
- Mariner's compass* improved, Vol. II. p. 396.
- Maritime* observations, Vol. II. p. 294—Vol. III. p. 90.
- Marriages* as to births, proportion of, Vol. III. p. 30.
- Mars*, his distance from the sun, Vol. I. p. 62.
- Marfeilles*, a poison kept there, Vol. III. p. 238.
- Marine situations*, their insalubrity inquired into, Vol. IV. p. 127—their quality and properties, *ib.* p. 128, 428.
- Marsh-air*, experiments and observations on, Vol. IV. p. 415 to 430.
- Marshes*, mode of drying them up, Vol. IV. p. 244.
- , salubrious in their general effects, Vol. IV. p. 429.
- Martin (Dr. Hugh)* on certain Indian dyes, Vol. III. p. 222.
- Maryland* and *Penns.* proposals for improving their inland navigation, Vol. I. p. 293.
- Mafke'yne (Nevil)* his letter to Mr. Penn, Vol. I. p. 40—his observations on the transit of Venus at Greenwich (G. B.) in 1769, p. 105—his account of the northern observations, *appendix*, p. 1.
- Mason and Dixon's* measurement of a degree of latitude, Vol. I. p. 96.
- Massachusetts*, proportion of persons to each family and house in, Vol. III. p. 31—marriages and births there, *ib.*—male inhabitants, 35—number of births and deaths at Salem, 38, 56—do. at Kingham, 56—longevity of the inhabitants, *ib.*
- Mathematical* and astronomical papers, Vol. I. p. 1 to 116—*appendix* thereto following, p. 116.
- Mayer's* celestial discoveries, Vol. II. p. 222.
- Meantes*, an order of Linnæus improperly suppressed, Vol. IV. p. 281.
- Measures and weights*, a new standard for, Vol. III. p. 328.
- Measurement* by Mason and Dixon of a degree of latitude, corresponds with another since made, Vol. I. p. 96.
- (*terrestrial*) of the difference of longitude and latitude between Norriton and Philadelphia observatories, Vol. I. *appendix* p. 5.
- Meat*, how to preserve, Vol. II. p. 30, 31.
- Medical history* of the *cortex ruber*, Vol. II. p. 289.
- *papers*, Vol. I. p. 368 to 404.
- *enquiries*, Vol. III. p. iii.
- Medicinal productions*, Vol. I. p. 235, 239, 250, 257, 258, 260, 262, 263, 264, 265, 266.———Vol. III. p. 102, 104, 114, 345.

Megaclyx, or great claw. See *Bones*.

Megatherium of Paraguay, Jefferson's observations on its skeleton, Vol. IV. p. 259.

Members of the A. P. S. a list of,—Vol. I. p. xii.—Vol. II. p. xxiv.—Vol. III. p. xxviii.—Vol. IV. p. xiv.

Memoir on the discovery of America, Vol. II. p. 263.

— concerning the fascinating faculty which has been ascribed to the rattle-snake and other American serpents, Vol. IV. p. 74.

— on the subject of a new plant, growing near Philadelphia, Vol. IV. p. 173.

— on a new species of firen, Vol. IV. p. 277.

— on the discovery of the remains of a new non-descript quadruped, Vol. IV. p. 246—with observations on the megatherium of Paraguay, 259.

— on the extraneous fossils denominated mammoth bones; principally designed to shew, that they are the remains of more than one species of non-descript animal, Vol. IV. p. 510.

— on the distillation of perfumons, Vol. I. p. 231.

— on amphibia, Vol. IV. p. 362.

— on the sand hills of Cape Henry (V.) Vol. IV. p. 439—supplement thereto, 444.

Mercury precipitated from oxygen gas, Vol. IV. p. 416.

Mercury, his distance from the sun, Vol. I. p. 62—account of his transit over the sun in 1769, p. 82, *appendix* 50—Vol. II. p. 249—in 1782, p. 260.

— — — affords with Venus's the best opportunity for determining the longitude, Vol. I. p. 82—his horary movement, 86—projection of his transit, 88—his diameter ascertained, *appendix*, 52—a remarkable period in this planet's motion, *appendix* 53—when first observed on the sun's disc, ib.

Meridian mark, a new method of placing it, Vol. II. p. 181.

—, line, a new way to find the true one, Vol. II. p. 251.

Messier's account of the comet of 1770, as it appeared in France, Vol. I. *appendix* p. 41.

Metallic conductors of lightning, a proposed addition to, Vol. III. p. 125—an improvement on, 321.

Metals, constitution of, Vol. IV. p. 452.

Meteor, or falling star, described, Vol. II. p. 174, 175.

Meteorological observations made at Philadelphia in 1770-1, Vol. I. *appendix* p. 70—*at* Bradford, (N. England) in 1772, Vol. II. p. 122—*at* Williamsburgh (Virginia) in 1777 and part of 1778, p. 141—*at* various places between Richmond and the Alleghany mountains in Bottetourt, in 1791, Vol. IV. 219—*at* sea and on shore, 272—*at* fort Washington (Cincinnati) 329.

— *enquiries*, Vol. III. p. xxv.

Mexican Indians, or Aztecas, some account of, Vol. IV. p. 183, 199, 204, 210, 213.

Mexico, instances of great longevity in, Vol. III. p. 50.

- Mica membranacea*, taken out of tumuli, Vol. IV. p. 203, 204—its uses among the Mexicans, *ib.*
- Middle colonies* of N. America, their climate changed, Vol. I. p. 272.
- Milk*, method of preserving, Vol. II. p. 31.
- Miller (Peter)* of Euphrata, on the time for sowing pease, Vol. I. p. 243—his description of a grotto at Swatara in Pennsylvania, Vol. II. p. 177.
- Mills*, an essential mistake corrected in the theory of, Vol. III. p. 144.
- further observations on, Vol. III. p. 185, 319—observations and calculations concerning, Vol. IV. p. 350, &c.
- Minerals*, &c. in America, observations on, Vol. I. *pref.* p. xi. xiii.—abundant in West Florida, 251.
- Mineral waters* of Bristol (Pennsylvania) analyzed, Vol. I. p. 303—in what diseases recommended, 306, 310, 313.
- Miners*, how to provide them with fresh air, Vol. II. p. 32.
- Miscellaneous papers*, Vol. I. p. 281.
- Mississippi*, apparent height of its water formerly, Vol. III. p. 219.
- Mobile bay*, latitude of, Vol. I. p. 253.
- country, great quantities of very large oyster shells there, Vol. p. 218.
- Moist air*, not unwholesome, Vol. II. p. 21.
- Moisture*, certain laws of, Vol. II. p. 51.
- discharged from pit-coal, Vol. II. p. 54.
- Moistness of atmosphere in England and France* greater than in N. America, Vol. II. p. 53 to 55.
- Mokassin snake* is a non-descript, Vol. IV. p. 380.
- Molasses* of maple-sugar, agreeable, Vol. III. p. 73—yields a spirit, *ib.*
- Moon*, viewed through a telescope, to different persons presents a different face, Vol. II. p. 38—inverted appearances on her face, when seen through the Cassiegrain telescope, accounted for, 41, 42.
- eclipsed and observed, Vol. III. p. 150.
- Morel (John)* his account of benni-seed oil, Vol. I. p. 239.
- Morgen (Dr. John)* his essay on the expressing of oil from sun-flower seed, Vol. I. p. 235—his communication of the medical history of the red bark, Vol. II. p. 289—his art of making anatomical preparations by corrosion, 366—his description of a living snake in a horse's eye, and of other unusual productions of animals, 383—his account of a motley coloured, or pyed negro girl and mulatto boy, 392.
- Moss (Henry)* a negro, turned white, Vol. IV. p. 295.
- Mosses and Musbrooms*, their sexual organs determined, Vol. III. p. 204.
- Mould-board*, one of the least resistance and easiest and most certain construction described, Vol. IV. p. 313.
- Mounds (Indian artificial)* some account of curious discoveries made therein, Vol. IV. p. 179, 181, 203, 205.
- Mountains (white)* of N. Hampshire described—the highest lands in N. England—Indian superstition towards them—their figure and extent; number of their summits uncertain—their materials and productions—meteors; why named the White Mountains, Vol. II. p. 42 to 49.
- in Virginia, barometrical measurement of those called the Blue Ridge

- Ridge, Warm Spring and Alleghany, Vol. IV. p. 216—other observations thereon by Mr. Jefferson, 222.
- Mud-Inguana*. See *Inguana*.
- Muhlenburgh (Henry)* his Index floræ Lancastriensis, Vol. III. p. 157—his Supplementum indicis floræ Lancast. Vol. IV. p. 235.
- Mulatto* boy, with a pyed skin, Vol. II. p. 392.
- Mulberry tree (native)* the leaves of it unpleasant to the native silk-worm, Vol. I. p. 253.
- Muriatic* and fulphuric acids, of the solution of iron in, Vol. IV. p. 457.
- Music*, a new notation of, Vol. III. p. 139.
- Muskingum* river, description of ancient remains of art there, Vol. III. p. 214.

N

- Naked-bear*, account of, Vol. IV. p. 260.
- Names* of the officers and members of the Amer. Philos. Soc. Vol. I. p. xii.—Vol. II. p. xxiii.—Vol. III. p. xxviii.—Vol. IV. p. xiv.
- Natchez*, observations for determining the lat. and lon. of the town of, Vol. IV. p. 447.
- Nancarrow (John)* his calculations relating to grist and saw-mills, for determining the quantity of water necessary to produce the desired effect, when the head and fall are given in order to ascertain the dimensions of a new-invented steam engine, intended to give motion to water-wheels in places where there is no fall, and but a very small stream or spring, Vol. IV. p. 348.
- Natural history*, method for preserving subjects of, Vol. I. p. 244.
- enquiries in, Vol. III. p. xv.
- meadows, some account of Vol. III. p. 219.
- Naval stores*, combination between Russia and Sweden to raise their price, Vol. I. pref. p. xiv.
- Navigation*, improvements in, Vol. I. p. 289, 293.
- inland, proposed improvements in, Vol. I. p. 293—Vol. IV. p. 299.
- Negro* girl, with a mottled skin, Vol. II. p. 392.
- Negroes*, their dark hue ascribed to the leprosy, Vol. IV. p. 289—curious effects produced by their marrying with white women, 294—their skin turned white, 295—proposal to excite among them a similar change of colour by artificial means, 297.
- Newcastle* court-house (Delaware) its distance from Philadelphia, Vol. I. p. 93, 96.
- New-England*, population of, Vol. III. p. 43.
- Newfoundland banks*, superior degree of cold in the water there, Vol. III. p. 93, 194.
- New-Jersey*, its population, Vol. III. p. 35.
- Niagara*, account of an earthy substance there, called the spray of the falls—with remarks on the cataract, Vol. III. p. 17—Ellicott's description of the same, Vol. IV. p. 227.

- Nicola (Lewis)* his method of preserving subjects in spirits, Vol. I. p. 244.
Nine-killer, a bird, described, Vol. IV. p. 124.
Nitre found and made, Vol. I. *pref.* p. xii.—mixed with water produces heat, and with snow, intense cold, *appendix* 33—other properties of, Vol. IV. p. 140.
Nitric acid, its composition, observations and experiments on the production of, Vol. IV. p. 472.
Nitrogen gas, what proportion in the atmosphere, Vol. IV. p. 128—observations on it, p. 6, &c. 418.
Non-descript animals, remains of, Vol. IV. p. 248, 259, 511.
Normandie (Dr. John De) his analysis of the chalybeate waters of Bristol (Pennf.) Vol. I. p. 303.
Norriton observatory (Pennf.) transit of Venus in 1769 observed at, Vol. I. p. 8, 13—its lat. fixed, 22, and lon. 59, *appendix* p. 2—account of the terrestrial measurement of difference of longitude between this observatory and that of Philadelphia, *appendix* p. 5.
North-America, diseases common to, Vol. III. p. iii. See *America*.
North-Carolina, described, Vol. III. p. 47—remains of a volcano in, p. 231.
North-west winds, why less frequent, Vol. I. p. 275.
North-western Territory, recapitulation of fine weather there during a certain period, Vol. IV. p. 347. See *Muskingum, Cincinnati, Niagara*.
Notation (a new) of music, Vol. III. p. 139.
Noxious vapours, in subterranean places, how easily dissipated, Vol. III. p. 324.
Numb-fish, or torporific eel, described, Vol. II. p. 170.
Nutation of the earth's axis, how to calculate it, Vol. IV. p. 51.

O

- O. (B.)* his description of a new machine for cutting files, Vol. I. p. 300.
Oats destroy the wild garlic, enemy to wheat, Vol. I. p. 242.
 — (American) their qualities, Vol. I. p. 192.
Objects of the Amer. Philos. Soc. Vol. I. *pref.* p. xv.
Occultation of Aldebaran by the moon observed at Washington in 1793. Vol. IV. p. 48.
Ocean, its temperature at certain depths, Vol. III. p. 90 to 96.
Officers of the A. P. S. Vol. I. p. xii—Vol. II. p. xxiii—Vol. III. p. xxviii. Vol. IV. p. xiv.
Ohio river, great bones found there, Vol. III. p. 219—Vol. IV. p. 511—ancient hieroglyphics there, p. 195—very dense but not unwholesome fogs on the river, p. 225—thermometrical observations made there, p. 330—the daily rise and fall of its water, 340.
 — falls of, remarkable for petrifications, Vol. III. p. 218.
Oil how affected on a surface of water, Vol. II. p. 310.
 — mixed with water, a remarkable phenomenon produced from, Vol. III. p. 14—explanations of it attempted, ib.
 — of cotton-seed, its virtues, and how obtained, Vol. I. p. 235. See *Ol. Bombac.*

- Oil* of sunflower seeds, account of, Vol. I. p. 234—essay on it, 235.
 — (*Caffor*) recommended to Americans, Vol. I. p. 239.
 — of benni-seed, account of, Vol. I. *appendix* p. 239—equal to Florence oil, *ib*.
Oils, from whatever vegetables, if obtained by expression, agree in their general qualities, Vol. I. p. 238.
Ol. bombar. [oil of cotton seed] how obtained, Vol. I. p. 235—medicinal in the cholic, *ib*.
Oliver (*Andrew*) his theory of lightning and thunder as opposed to Dr. Franklin's, Vol. II. p. 74—his theory of water-spouts, Vol. II. p. 101.
Opium, observations on, Vol. IV. p. 388—how and where obtained, 389—its component parts, 390, 394—compared with that extracted from garden lettuce, and various experiments made on both, 392 to 410—mode of extracting the latter, 411.
Optics, a deception in, explained, Vol. II. p. 37.
Optical problem, by Francis Hopkinson, Vol. II. p. 201—and solved by Mr. Rittenhouse, 202.
Orb of the earth, its eccentricity and distance from the sun, Vol. I. p. 103.
Ores and minerals, variety of, in America, Vol. I. *pref.* p. xiii.
Organs of generation in plants asserted, Vol. III. p. 203.
Orthography and orthoepey, how to fix them, Vol. III. p. 262—imperfection of the former, 268—farther observations on orthography, 271—advantages of a new one, 272.
Orrery, description of a new one invented by Mr. Rittenhouse, Vol. I. p. 1.
Otto (*Dr.*) his account of an oil drawn from sunflower seeds, Vol. I. p. 234.
 — (*Monf.*) on the discovery of America, Vol. II. p. 263.
Overfetting of ships, a preventive against, Vol. II. p. 302.
Owls venerated by certain nations, Vol. IV. p. 206.
Oxyds containing oxygen, Vol. IV. p. 458.
Oxygen, or dephlogisticated air, absorbed in the phlogification of air, Vol. IV. p. 1—observations on it, *ib.* to p. 11—in what oxyds contained, Vol. IV. p. 458—combined with azote produces the nitric acid, 472.
 — *gas*, or pure respirable air, what proportion of it in the atmosphere, Vol. IV. p. 128, 417—how to promote a supply of it, *ib.* p. 141—mercury precipitated from it, 416—a principal ingredient in marsh air, 427.
Oyster-shell beds (fossil) in the Atlantic states, Vol. IV. p. 439.
 — *shells* of prodigious size and vast quantities in the Mobile country, Vol. III. p. 218—used in compounding Indian earthen ware, *ib*.

P

- Page* (*John*) his description of a meteor seen in Virginia, Vol. II. p. 173—letter to him from Dr. Rittenhouse, with remarks on that meteor, 175.
Paints (valuable) Vol. I. *pref.* p. xii.
 — Vol. I. p. 256.
Pais de Vaud, proportion of deaths there, Vol. III. p. 41.

- Papaver somniferum* [white poppy]. See *Opium*.
- Paraguay*, account of the skeleton of a huge non-descript quadruped discovered there, Vol. IV. p. 259.
- Parallax of Venus*, observations on it, Vol. I. p. 63, 102, 116, *appendix* 57.
- of the *sun*, important to be known, Vol. I. p. 42—how to determine it, *ib.*—further observations on the, 65, 73, 75, 77, 102, 103, 105, *appendix* 3, 12, 54, 67—explained, 103—how to ascertain it with the greatest possible precision, *appendix* 40.
- — and planets explained, Vol. I. p. 103.
- Paris*, births and deaths there compared, Vol. III. p. 36.
- Parisian* hypothesis of the eccentricity of the earth's orb from the sun, and distance, Vol. I. p. 103.
- Parsnips*, how to preserve them for any length of time, Vol. II. p. 199.
- Partridge*, with two hearts, Vol. II. p. 330.
- Passage* of herrings, Vol. II. p. 236.
- Patterson (Rob.)* his method of finding the true meridian line, and variation of the compass, Vol. II. p. 251—his explanation of a singular phenomenon, Vol. III. p. 13—on a new notation of music, 139—his improvement on lightning rods, 321 [*gained the Magellanic prize*]—his easy and accurate method of adjusting the glasses of Hadley's quadrant, on land, for the back-observation, Vol. IV. p. 154.
- Peacock-flower* described, Vol. III. p. 229.
- Pea (common corn)* excellent improver of soils, Vol. III. p. 227.
- Pease* secured against insects, Vol. I. p. 222—the time for sowing them and preventing the worm, 243.
- Peale (C. W.)* his merit in establishing a Museum, Vol. IV. p. 365.
- Pearson (James)* his account of the external contact of Venus with the sun, Vol. I. p. 50.
- Pekin*, in what similar to Philadelphia, Vol. I. *pref.* p. iv.
- Penn (Tho.)* sends a telescope and micrometer to the Amer. Philos. Society's committee for observing the transit of Venus, Vol. I. p. 10.
- Pennsylvania* legislature assist the society's committee, Vol. I. p. 10.
- , proposals for improving its inland navigation, Vol. I. p. 293—cause and encrease of bilious and intermitting fevers there, with hints for preventing them, Vol. II. p. 206, 290—its population in 1683, Vol. III. p. 35—and climate, 51—its extent from east to west, Vol. IV. p. 35—how bounded on the north, *ib.* p. 39—miscellaneous observations on its western parts, 224—crystallized basalt found in, 445.
- Pendulum*, an improved one invented and described by Mr. Rittenhouse, Vol. IV. p. 27—wooden pendulums imperfect, *ib.* p. 29. curious experiments on the subject, *ib.* p. 30, 31.
- Perkins (Dr. John)* his conjectures concerning wind and water-spouts, tornadoes and hurricanes, Vol. II. p. 335.
- Persemon* trees, profitable—their wood hard and charged with salts, Vol. I. p. 233—yield a valuable gum, 234.
- *fruit*, memoir on the distillation of, Vol. I. p. 231—produces a fine spirit, *ib. pref.* p. viii.—preparation of it for the still, 232—an excellent beer made from it, 234.

- Petrifications*, frequent in the western country, Vol. III. p. 218.
 ——— (marine) intermixed with flint and limestone at L. Erie, Vol. IV. p. 226.
- Pit-coal* introduced into use in England, Vol. II. p. 19—neglected in France, 19, 20—used in China, 33—its smoke deemed salubrious, 20.
- Phenomena*, Vol. I. p. 283, 285—a singular one explained, Vol. III. p. 13—looming, 62—in magnetism the solution of, Vol. IV. p. 324.
- attending the transit of Venus in 1769, Vol. I. p. 27, 28, 29, 46, 49, 50, 94, 101, 106, 109, 111, 115, *appendix* 12 to 20, 68.
- of Mercury, Vol. I. p. 83.
- Philadelphia* compared with Pekin, Vol. I. *pref.* p. iv.—lat. of, Vol. I. p. 54.—lon. of, 6, 59, 93, 96—difference between its meridian and that of Greenwich, 59—courses and distance from its observatory to that of Newcastle court-house, 92—difference of its lon. and lat. with those of Norriton, *appendix* 5—meteorological observations made there in 1770, p. 1. *appendix* 70.—births and deaths in, Vol. III. p. 37, 39, 44, 54, 56, 59—its size in 1683, p. 35.
- Philological* view of some very ancient words in several languages, Vol. IV. p. 476.
- Philosophical* society held at Philadelphia, their laws and regulations, Vol. I. p. v.—Vol. II. p. v.—Vol. IV. p. iii.—list of the officers and members Vol. I. p. xiii—Vol. II. p. xxiii.—Vol. III. p. xxviii.—Vol. IV. p. xiv.—charter of incorporation, Vol. II. p. xi—law to encrease the deposits and subscriptions of the members, Vol. II. p. xix—extracts from minutes concerning the Magellanic prize, *ib.*—Vol. IV. p. vii.—See *American P. Soc*
- Phlogiston*, observations and experiments concerning, Vol. IV. p. 1 to 11—not a simple substance, *ib.* p. 7—how formed, *ib.*—farther observations on it, p. 11 and 382—considerations thereon in opposition to Dr. Priestley, p. 452. See *Azotic gas*.
- rejected, why, Vol. IV. p. 452.
- Physico-mathematical* subjects recommended to the attention of Americans, Vol. III. p. xiii.
- Plague*, fugar an antidote for, Vol. III. p. 75.
- Planet*, how to determine the true place of one, in an elliptical orbit, directly from the mean anomaly, by converging series, Vol. IV. p. 21.
- Planets*, their respective distances from the sun calculated, Vol. I. p. 62—Stuart's method of deducing their parallaxes and distances, 76. Their parallaxes explained, 103—method of calculating their eccentric anomaly, Vol. IV. p. 67.
- Plants* and seeds, directions for sending them abroad, Vol. I. p. 266, 269, 270.
- (foreign) catalogue of such as merit attention in America, Vol. I. p. 255.
- not originally natives of America, Vol. III. p. 241.
- (*crypt gamick*) observations on, Vol. III. p. 202—their organs of generation asserted, 203—how regenerated, *ib.*—various opinions on the

- the generation of, 205—their parts accurately described, 211—the creative power of plants, 346.
- Plant*, a new one discovered near Philadelphia, Vol. IV. p. 173.
- Plico Polonica* of the Poles, a symptom of leprosy, Vol. IV. p. 293.
- Plough*. See *Mould-board*.
- Podophyllum diphyllum* of Linnæus, botanically described, Vol. III. p. 334.
- Poison* of the rattle-snake, how counteracted, Vol. III. p. 102, 104, 109, 114.
- Poisonous plant*, an account of one in Virginia, Vol. III. p. 234.
- Poejar* and β Bootes, the right ascension and declination of, Vol. III. p. 116.
- Poles* of the earth supposed change of position, Vol. III. p. 12.
- Polypi*, opinion concerning their generation and reproduction, Vol. III. p. 204.
- Ponds*, method of draining them in level grounds, Vol. III. p. 325.
- Popular diet* of the Americans, the cause of various diseases, Vol. III. p. vi.
- Population* (Indian) See *Indian population*
- of N. America, observations on its vast increase and importance, Vol. III. p. 25—compared with that of other countries, 27, 134—doubled in 25 years, 42—in 15 and 20 years, 43.
- Poppy* (*white*) produce of it per acre, Vol. IV. p. 412. See *Opium*.
- Prairies*, some account of, Vol. III. p. 219.
- Preachers* (illiberal), the bane of real virtue, Vol. III. p. vii.
- Premiums*, for what subjects offered, Vol. IV. p. v.—to whom adjudged, p. vii.
- Presents* to the A. P. Soc. Vol. II. p. 398—Vol. III. p. 351—Vol. IV. p. xxvii.
- Preserving* of meats, butter and milk, Vol. II. p. 30, 31.
- of wine, Vol. I. p. 183, 188, 190.
- , of parinips, Vol. II. p. 199.
- Presqu'isle*, remarkable phenomenon there, Vol. III. p. 62—effect of the winds, Vol. IV. p. 225—subject to heavy dews and fogs, ib.—its atmosphere moister than in the middle Atlantic states, ib.—little limestone there, 226—lat. of the town there determined, p. 231.
- Priestley's* (*Dr.*) electrical battery described. Vol. II. p. 93—his and Beccaria's ideas of electricity, 76—his experiments and observations relating to the analysis of atmospherical air, Vol. IV. p. 1—his farther experiments relating to the generation of air from water, ib. p. 11 to 20—his appendix to, and correction of the two preceding articles, 382.
- his doctrine of phlogiston rejected, 452.
- Prior* (*Tho.*) his account of the contacts in the transit of Venus, Vol. I. p. 49.
- Prize Medal* of Magellan, how and in what cases to be awarded, Vol. II. p. xix. See *Maglanic prize*.
- Problem* (optical) by Mr. Hopkinson, Vol. II. p. 201—solved by Mr. Rittenhouie, 202.
- Process* for making maple sugar, Vol. III. p. 67.
- East India sugar, ib. p. 79.
- Projection* of the transit of Mercury in 1769, Vol. I. p. 88.
- Pronunciation*, Dr. Johnson's rule for it erroneous, Vol. III. p. 270—rules for the pronunciation of a new proposed alphabet, 280.

Providence (R. I.) astronomical observations at, Vol. I. p. 97—its longitude and latitude, 103.

Punctuation, observations on, Vol. III. p. 307—a new mode proposed, 308.

Putrid sore throat, &c. how cured, Vol. II. p. 288.

Putrifaction, excites heat, Vol. I. *appendix* p. 34.

Q

Quadrant (*Godfrey's*) an improvement of, Vol. I. *appendix* p. 21.

——— (*Hadley's*) an easy and accurate way to adjust its glasses, on land, for the back observation, Vol. IV. p. 154.

Queries concerning vapours, the electrical state of the atmosphere and aurora borealis, Vol. II. p. 100.

R

Rain, the effect of electricity, Vol. II. p. 100.

—— with fishes, frogs or tadpoles, accounted for, Vol. II. p. 117.

—— quantity of, at Bradford (N. Eng.) in 1773, Vol. II. p. 135—in Ireland, Vol. IV. p. 244.

Raisins, method of making, Vol. I. p. 193.

Rarefied air explained, Vol. II. p. 2.

Rattle-snake [*crotalus horridus*] on the cure of its bite, Vol. III. p. 100—its poison how counteracted, 102, 104, 109—reputed cures for it, 114.

——— memoir on the fascinating faculty ascribed to this and other American serpents, Vol. IV. p. 74—other observations thereon, 363, 370.

——— curious particulars concerning the, Vol. IV. p. 366—different species of, 368—a new species described, *ib.*—winter retreats of, 374.

Red-bark [*cortex ruber*] medical history of, Vol. II. p. 289—more efficacious than common bark, 290.

Regeneration of plants, Vol. III. p. 203.

Regulations of the A. P. S. Vol. II. p. v.

Relaxation, the predisposing cause of tetanus, Vol. II. p. 227.

Rigging and cables of ships, proposed improvement in, Vol. II. p. 297.

Right ascension and declination of β bootes and the pole-star, Vol. III. p. 116.

Rittenhouse (*David*) his new-invented orrery described, Vol. I. p. 1—his account of the transit of Venus, 8, 13, 26—he fixes the latitude of Norriton, 22—his delineation of the transit, 36—his account of a comet in 1770, *appendix* p. 37—his easy method of deducing the true time of the sun's passing the meridian per clock, *appendix*, 47—his explanation of an optical deception, Vol. II. p. 37—his observations and conjectures on a falling star or meteor, 175—his account of some experiments on magnetism, in a letter to John Page, Esq. 178—his invention for placing a meridian mark, 181—his adoption of a spider's thread, instead of silk, a great improvement, 183—his observations on a lately discovered comet, 195—his solution of an optical problem stated by F. Hopkinson, Esq. 202—on the transit of Venus over the sun's disc, Nov. 12, 1782, p. 260—

- p. 260—his and Dr. Jones's account of houses in Phila. struck by lightning, Vol. III. p. 119—his and Mr. Hopkinson's observations on the effects of lightning on a house with two conductors, 122—his astronomical observations, 150—on the method of finding the sum of the powers of the sines, &c. 155—his account of a comet, 261—his mode to determine the true place of a planet, in an elliptical orbit directly from the mean anomaly, by converging series, Vol. IV. p. 21—his improvement of time-keepers, *ib.* p. 25—his account of the expansion of wood by heat, *ib.* p. 29—his method of raising the common logarithm of any number immediately, *ib.* p. 69.
- River-navigation*, improvement in its boats, Vol. IV. p. 298—inclined planes preferable to locks, 299—description of a boat recommended to be used, 301.
- Robinson (Ebenezer)* his easy and expeditious method of dissipating noxious vapours in wells, &c. Vol. III. p. 324.
- Rock*, a curious one, Vol. II. p. 50.
- Rocks* artificially and curiously marked, Vol. III. p. 219—Vol. IV. p. 253.
- , &c. (the strata of) beyond the mountains placed *horizontally*, Vol. IV. p. 227.
- Roman (ancient)* substitute for espaliers, Vol. I. p. 170—how they preserved wine, 188.
- Romans (Bernard)* on the mariner's compass, Vol. II. p. 396.
- Rome*, proportion of deaths in, Vol. III. p. 41, 59.
- Rooms*, an improved mode of warming them, Vol. II. p. 29, 33.
- Rules* of the A. P. S. two fundamental ones, Vol. I. p. iii.
- Rumsey's* improvement on Barker's mill, observations on, Vol. III. p. 144.
- Rural economy*, enquiries into, and how applicable to the U. States, Vol. III. p. vii.
- Rush (Dr. Benj.)* on the cause of the increase of bilious and intermitting fevers in Pennsylvania; with hints for preventing them, Vol. II. p. 206—on the late Dr. Martin's cancer-powder; with observations on cancers, 212—on the cause and cure of the tetanus, 225—on the sugar-maple, and manner of obtaining the sugar, Vol. III. p. 64—his observations intended to favour a supposition, that the black colour (as it is called) of the Negroes is derived from the leprosy, Vol. IV. p. 289.
- Rusk*, the true original sea biscuit, Vol. II. p. 322.
- Russia* and Sweden combine to raise the price of naval stores, Vol. I. *pref.* p. xiv.
- Russians* unsuccessful in observing the transit of Venus in 1769, Vol. I. *appendix.* p. 3.
- Ruston (Dr. Thomas)* on the cause, cure and prevention of smoky chimnies, Vol. II. p. 231.

S

- Saint Andrew*, W. Florida (bay of) described, Vol. I. p. 253.
- Saint Augustine*, a most healthy climate, Vol. III. p. 49.

- Salem* (Massachu.) births and deaths at, Vol. III. p. 38, 56, 59.
Salt (*marine*) combined with vegetable acid, virtues of, Vol. II. p. 284.
Saltpetre mines, Vol. I. *pref.* p. xii.
Sand-hills of Cape Henry (Vir.) memoir on the, Vol. IV. p. 439.
Santa Rosa, W. Florida, lat. of, Vol. I. p. 253.
Scp of the fugar maple, how excellent and uieful, Vol. III. p. 69, 73.
Sargent (*Winthrop*) his letter to Dr. Barton, accompanying drawings and some account of certain articles which were taken out of an ancient tumulus, or grave, in the western country, Vol. IV. p. 177.
Satellites of Jupiter, their eclipses observed, Vol. I. p. 21, 55—their immersions and emerfions as observed at Wilmington (Del.) and the western obferva. in 1784, Vol. IV. p. 32—at Baltimore in 1788, ib. p. 48.
Saturn's diftance from the fun, Vol. I. p. 62.
Savannah, in Georgia, proportion of deaths at, Vol. III. p. 59.
Saw-mills, particular defcription of certain, Vol. IV. p. 350.
Scaul, a new method of treating the effufion that collects under it after fracture, Vol. IV. p. 433.
Sculptured rock on the Kenhawa, Vol. IV. p. 253.
Sea-veffels; machine for pumping, without manual labour, Vol. I. p. 289.
Sea-water, warmest out of foundings, Vol. III. p. 83—its temperature compared, 194—ftate of, 90, 200.
 —air, experiments on, Vol. IV. p. 262, 269, 272—more rarefied than land air, 269.
Seeds and plants, how to preferve them for transportation, Vol. I. p. 266, 269, 270.
Sentinel, or felf-moving register, for preferving an equal degree of heat, defcription of one, Vol. I. p. 286.
Serpents, M. de la Cepede's diftribution of them into genera, Vol. IV. p. 379—their characters, 380—the mokkafin, a non-defcript fnake, ib.
 —, cures for their bite, Vol. III. p. 100, 102, 104, 109, 114—their fascinating faculty controverted, Vol. IV. p. 74—observations on, p. 362.
Sexual organs of plants, Vol. III. p. 204—of moffes and muthrooms difcovered by De Beauvois, ib.
Seybert (*Dr. Adam*) his experiments on land and fea-air, Vol. IV. p. 262—his experiments and obfervations on the atmosphere of marfhes, 415.
Shark's teeth (offil) abundant in Virginia Vol. IV. p. 433.
Sheep, various kinds defcribed, Vol. IV. p. 149 to 154.
Shetland-wool peculiarly foft, Vol. IV. p. 433.
Shells. See *Offil*.
 — (*prodigious oifter*) in vaft quantities in the Mobile country, Vol. III. p. 218.
 — (*offil and petrified*), numerous in the western country, Vol. III. p. 218—and elfewhere, Vol. IV. p. 439.
Ship pumps, new method propofed for working them, Vol. I. p. 289—bore to be enlarged, 290—powers of, 291.
 —, an invention to affift her failing, Vol. III. p. 331.

- Ship*, a method to prevent their foundering, 301—proposed improvement in their rigging and cables, 297—objections to the modern construction of, 302—how to provide against the accidents of overfetting, fire, lightning, running foul of others and ice at night, *ib.*
- 's *way*, a new machine for measuring it, Vol. II. p. 159—Vol. III. p. 239—observations on, Vol. II. p. 294.
- Shippén (Joseph)* his account of the contacts in the transit of Venus over the sun, Vol. I. p. 45.
- Signals*, an improvement on, Vol. IV. p. 162.
- Silk cocoons of America* (native) larger and the silk stronger than Italian, Vol. I. *pref.* p. vi.
- *worm*, its process from the egg to the cocoon, Vol. II. p. 347—natural history of, 350—how to manage it, 351—cocoon of various kinds, 353—the filature, 361.
- *worms* (native) Vol. I. *pref.* p. vi.—observations on them p. 224—more beautiful on every change, 228—averse to change of food, 229—easier to raise than the Italian worm, 230—great weight of their cocoons, *ib.*
- *grafs*, or Indian hemp of America—*Q.* if not the Chinese *herba*? Vol. I. *pref.* p. vi.
- Sines*, how to find the sum of their powers, Vol. III. p. 155.
- Siren*, or inguana [*firen lacertina*] a new species of, Vol. IV. p. 277. See *Inguana*.
- operculata, a new species of inguana discovered, Vol. IV. p. 277—described, 279.
- an intermediate class connecting the amphibiz with fish, Vol. IV. p. 277.
- Skeleton* of an unknown quadruped lately discovered in Virginia, Vol. IV. p. 236. See *Bones*.
- Slate*, and excellent freestone on L. Erié, Vol. IV. p. 226.
- Smith (Reverend Dr. Wm.)* his communication of calculations and projections of the transit of Venus in 1769, Vol. I. p. 4—his account of that transit, 8—and of the contacts, 29—of Mason and Dixon's measurement of a degree of latitude, 96—of the terrestrial measurement of the difference of lon. and lat. between Philadelphia and Norriton observatories, *appendix* p. 5—of the transit of Mercury in 1769, *appendix* p. 50—his deduction of the sun's parallax from a comparison of the American observations of the transit of Venus in 1769, with European observations of the same, p. 54.
- (*Thomas P.*) his account of a kettle for boiling inflammable fluids, Vol. IV. p. 431—his account of crystallized basalt found in Pennsylvania, p. 445.
- Smoke* of burnt bones, destructive to bugs, &c. Vol. I. p. 222.
- , why it ascends, though heavier than air, Vol. II. p. 2—how to burn it, 33, 57—burning it a great saving of fuel, 67—useful for heating the walls of a hot house, 74.
- Smoky chimnies*, causes of, Vol. II. p. 5, 10, 12, 13, 14, 15, 16, 17, 232—how to remedy them, 6, 11, 12, 14, 15, 17, 18, 23, 232.
- Snake* in a horse's eye, Vol. II. p. 385.
- (*rattle*) on the cure of its bite, Vol. III. p. 100—how to counteract its poison, 102, 104, 109—reputed cures for it, 114—on its supposed fascinating faculty, Vol. IV. p. 74. See *Serpents*.

- Snow* and frost, decreased of late in N. America, Vol. I. p. 275.
- Sore throat*, how cured, Vol. II. p. 288.
- Sounds* in the English language, a table of, Vol. III. p. 292—from what borrowed, 296.
- South-Carolina* climate, Vol. III. p. 48.
- Southern colonies*, directions concerning the culture of the grape in, Vol. I. p. 157.
- Soy*, or India ketchup, method of preparing it, Vol. I. p. 259.
- Spafins*, how cured, Vol. II. p. 225.
- Speedy* elevator, a new invented machine for gaining inaccessible heights, &c. description of a, Vol. IV. p. 519.
- Spice-wood*, excellent in some diseases, Vol. I. *pref.* p. ix.
- Spider*, its thread placed in a transit telescope by D. Rittenhouse, with vast effect, Vol. II. p. 183.
- Spirito Sancto*, E. Florida (bay of) capable of receiving first rate ships of war, Vol. I. p. 253.
- Spirits*, an easy method of preserving subjects in, Vol. I. p. 244.
- *of perfumons*, Vol. I. p. viii.—*appendix*, p. 231,—Vol. III. p. x.—*of currants*, 249.
- *of wine* convertible into inflammable air, Vol. IV. p. 19.
- (*ardent*) obtained from the sugar-maple, Vol. I. *pref.* v. and from perfumons, *pref.* viii.—*appendix* p. 231.
- Spring-block*. See *Block*.
- Standard* for weights and measures, Vol. III. p. 328.
- Stirling* (*Lord*) his account of the comet of 1770, Vol. I. *appendix* 45.
- Staffordshire* chimney, or fire-place, described, Vol. II. p. 25.
- Star Arcturus*, his great celerity of motion westward, Vol. II. p. 224.
- Stars* (*attendant*) discovered, Vol. II. p. 222—useful for determining the motion of fixed stars, ib.
- how to calculate their aberration, Vol. IV. p. 51.
- Steam-engine*, a new invented one described for giving motion to water-wheels in certain situations, Vol. IV. p. 355—its superior advantages, 357.
- Steel*, rubbed against steel, produces magnetism, Vol. II. p. 180.
- Stove* (*Chineſe*) described, Vol. II. p. 33—proposed addition to it for burning the smoke, ib.
- Stoves*, great savers of fuel, Vol. II. p. 20, 35.
- (*German*) described, Vol. II. p. 34.
- for burning of pitcoal and consuming its smoke, Vol. II. p. 57.
- Strata* of earths beyond the Atlantic mountains lie *horizontally*, Vol. IV. p. 227.
- Sub-marine* vessel, a new invented one, Vol. IV. p. 303—curious experiments thereon, 308, 310, 311—various attempts made on British ship-ping, 310—the British fire on and sink it, 311—origin of the battle of the kegs, 312.
- Subterranean* places, how to dissipate noxious vapours from, Vol. III. p. 324.
- Süe* (*Monſ.*) his manner of preparing anatomical subjects in wax, Vol. II. p. 381.
- Sugar*, very nourishing, Vol. III. p. 74—its virtues and uses, ib.—an antidote for the plague, Vol. III. p. 75—manner of making it in the East Indies, 79.

- Sugar-maple* tree sap, yields a fine spirit, Vol. I. *pref.* p. v.—and excellent vinegar, p. 73. See *Acer saccharinum*, and *Maple*.
- Sulphuric* and *muriatic* acids, of the solution of iron in, Vol. IV. p. 457.
- Sumach* tree supposed to yield the gum copal—proposed as a dye—the leaves mixed by Indians with their tobacco, Vol. I. *pref.* p. ix.
- Sun*, cause of his rays producing heat, Vol. I. *appendix* p. 34—his parallax important to be known, *ib.* p. 42—how to determine it, *ib.* and *appendix* 40—the parallax deduced from a comparison of American observations on the transit of Venus with those of Europe, p. 54—method for ascertaining it first conceived by Dr. Halley, *ib.*—an easy mode of deducing the true time of the sun passing the meridian per clock, *appendix* p. 47—his distance from the planets, p. 62—parallaxes, 65, 73, 75, 77, 78—do. explained, 103—mean distance from the earth, *ib.*—horary motion, 86—diameter, 52, 79, 84, 101—eclipsed, 113.
- , observations on the transit of Mercury over the, Vol. III. p. 150.
- , eclipses of, Vol. II. p. 239, 250.
- Sun-flower* oil, account of, Vol. I. p. 234—essay on expressing it, 235.
- Supplementum indicis floræ Lancastriensis*, Vol. IV. p. 235.
- Surinam* (*torpedo* of) described, Vol. II. p. 166, 170.
- Swamp*, definition of the word, Vol. IV. p. 440.
- Swatara*, description of a grotto there, Vol. II. p. 177.
- Sweden*, some account of its climate, Vol. III. p. 52—proportion of deaths in, 59.
- Swedes* unsuccessful in viewing the transit of Venus in 1769, Vol. I. *appendix* p. 3.
- Sweet springs* of Virginia, observations on, Vol. II. p. 197.
- Swimming anchor* to keep a vessel from off a lee shore, proposed and described, Vol. II. p. 311.
- Syllables*, observations on, Vol. III. p. 299.

T

- Tadpoles* falling in a shower of rain, the cause of, explained, Vol. II. p. 117.
- Tar* and hog's-lard useful to preserve grape vines, Vol. I. p. 164.
- Tatham* (*Col. Wm.*) his observations on the country below the falls of James river (*Vir.*) Vol. IV. p. 444.
- Teeth* and bones (fossil) account of some found in Virginia, Vol. IV. p. 439.
- Telegraph*, an essay on one, Vol. IV. p. 162.
- Temperature* (*presumable*) in comets, Vol. I. *appendix* p. 29.
- of Ireland, Vol. IV. p. 244.
- Tennessee river*, petrifications there, Vol. III. p. 219—curiously marked rocks on a branch of, *ib.*
- Test* (*infallible*) for detecting the presence of arsenic, Vol. II. p. 214.
- Tetanus*, on the cause and cure of, Vol. II. p. 225—predisposed by relaxation, 227—not confined to the human species, 230.
- Theory* of thunder and lightning, Vol. II. p. 74.
- of water-spouts, Vol. II. p. 101.
- of the earth, queries and conjectures concerning a, by Dr. Franklin, Vol. III. p. 5.
- of water-mills, &c. observations on, by W. Waring, Vol. III. p. 144—continued, 319.
- of calculating the aberration of the stars, the nutation of the earth's axis, and the semi-annual equation, Vol. IV. p. 32.

- Thermometer*, exceeded not 95° in Virginia, Vol. II. p. 143—at 100° in Philadelphia, ib.
- , its use in discovering banks, soundings, &c. at sea, Vol. III. p. 82, 198.
- Thermometrical* journals of the water and air at sea, Vol. III. p. 90, 200.
- observations at Fort Washington, Cincinnati, in 1790–1.
- Thomas (Rich.)* and others, their account of Venus's transit over the sun in 1769, Vol. I. p. 89.
- Tin* known to the Florida Indians, Vol. IV. p. 202.
- Thomson (Charles)* his observations on the internal contact in transit of Venus, Vol. I. p. 50, *appendix* 38.
- Thornton (Dr. Wm.)* his treatise on the elements of written language, &c. with an essay for teaching the dumb to speak [*gained the Magellanic prize*] Vol. III. p. 262.
- Thunder* and lightning, a theory of, Vol. II. p. 74.
- Time-keepers*, Rittenhouse's improvement of, Vol. IV. p. 26.
- Tolteca Indians*, some account of them, Vol. IV. p. 184.
- Tornado* described, Vol. II. p. 342, 346.
- Torpedo*, or electrical eel of Surinam described, Vol. II. p. 166.
- Torporific eel*, or numb fish described, Vol. II. p. 170—its power compared with electricity, 172.
- Torricellian vacuum*, magnetic experiments in the, Vol. IV. p. 327.
- Towns*, greatest proportion of deaths in, Vol. III. p. 41.
- Trade-wind*, defined, Vol. I. p. 273.
- Traditions (Indian)* Vol. III. p. 216, 220—Vol. IV. p. 207, 209, 260, 516—not to be depended on, ib.
- Trajectory* of the comet's path in 1770, with the elements of its motion, Vol. I. *appendix*, p. 37.
- Transit* of Venus over the sun in 1769, as observed at different places, Vol. I. p. 4, 5, 8, 13, 26, 28, 29, 32, 45, 48, 49, 50, 82, 89, 97, 105, 114—*appendix* p. 1—Vol. II. p. 246—delineations of the transit, Vol. I. p. 36, 66—account of observations on the former, 4, 2—observations on it, made at Hudson's bay, *appendix* p. 4—all the observations made thereon, collected together, *appendix* 12.
- in 1761—observations on it, Vol. I. p. 67.
- in 1769—do. Vol. I. p. 82—projection of this transit, 88—another account of the same transit, *appendix* 50—how useful towards fixing the longitude of places, *appendix* 53. See *Venus*.
- of Mercury, in 1769, Vol. I. *appendix* p. 50—Vol. II. p. 249—in 1782, Vol. II. p. 260—Vol. III. p. 150.
- Trees* contribute to health, Vol. II. p. 209—the willow a great purifier of air, ib.
- recommended in certain situations, Vol. IV. p. 142.
- Trepanning*, observations on Vol. IV. p. 433.
- Trichonna* [Plico-Polonica] a symptom of leprosy, Vol. IV. p. 293.
- True honey-bee*, of America, Vol. III. p. 241.
- Tulip-tree* [liriodendron tulipifera] stimulant effects of camphor upon it, Vol. IV. p. 232.
- Tumuli*, in the N. W. T. &c. curious discoveries made therein, Vol. IV. p. 179, 203, 205.

Turbiib mineral, not a pure oxyd, but a sulphate of mercury, Vol. IV. p. 453.

Turner (Judge) his thermometrical observations made at Fort WASHINGTON, commencing June 1790, and ending April 1791—to which are added, for some time, the rise and fall of the Ohio, Vol. IV. p. 329, 334—his memoir on the extraneous fossils denominated mammoth bones: principally designed to shew, that they are the remains of more than one species of non-descript animal, Vol. IV. p. 510.

U

United States of N. A. an essay on those enquiries in natural history which at present are most beneficial to them (viz.)

Medical enquiries, Vol. III. p. iii.

Rural economy vii.

Physico-mathematical xiii.

Natural history xv.

Meteorology xxv.

———— population of, Vol. III. p. 25, 42, 134—in what period doubled, 43—proportion of inhabitants under 16 years, ib.—particular instances of longevity in, 44—account of climates in, vi, 43, 47, 51—Neptunian origin of their sea coast, Vol. IV. p. 439, 445.

Universal magnetic needle, Vol. I. p. 254.

———— alphabet recommended, Vol. III. p. 263.

Uniculated quadruped, the bones of an unknown one discovered in Virginia, Vol. IV. p. 247.

Utenfils, used in making of wine, Vol. I. p. 195.

V

Vapour, query concerning, Vol. II. p. 100—produced in cold air, experiments on, Vol. III. p. 125.

———— (noxious) in wells, &c. an easy and quick method of dissipating, Vol. III. p. 324.

Variation of the compass, how to find it, Vol. II. p. 251.

Vegetable acid, combined with marine salt, its virtues, Vol. I. p. 284.

———— kingdom in N. America, observations on it, Vol. I. *pref.* p. viii. 250.

———— productions of the U. States, Vol. III. p. x.

———— all reproduced by their own particular organs, Vol. I. p. 211.

Vegetables, stimulant effects of camphor on, Vol. IV. p. 232, 234.

————, on the early condition of, Vol. IV. p. 503.

Velocity of light, Vol. I. *appendix* p. 36.

———— (extraordinary) of the comet of 1770, Vol. I. *appendix* p. 37, 46.

Veneral disease, Indian cure for it; Vol. I. p. 250.

Venus, calculations and projections of her transit in 1769, Vol. I. p. 4, 5, 26, 89—accounts of the transit, 8, 13, 26, 28, 29, 32, 45, 48, 49, 50, 82, 89, 97, 105, 114, 246, *appendix* p. 2, 12, to 20—delineations of it, p. 36, 66—surrounded by a dense atmosphere, 49—observations

- tions on her tranfit in 1761, p. 67—her diameter, 52, 79, 84, 101, appendix 4—mean diftance from the fun, ib.—observations on her paral-
lax, 63, 102, 116, appendix 57. See *Tranfit*.
- Veffel*, how to affift her failing, Vol. III. p. 331.
- (a fub-marine) principles and conftruction of, Vol. IV. p. 303—curi-
ous experiments with, 308, 310, 311.
- Vefuvius*, account of its eruption in 1767, Vol. I. p. 281—moft remark-
able eruptions of, 285.
- Vienna*, proportion of deaths, &c. at, Vol. III. p. 57.
- Vinegar* of the fugar-maple excellent, Vol. I. p. 73.
- Vines*, effay on the culture of, and of making wine in N. America, Vol. I.
p. 117—climate well adapted, 120—productivenefs, 121—how to
plant and manage them, 123—and form a nurfery, 125, 134—the
vines moft fuitable, 126—felecion of cuttings when to procure and pre-
ferve them over winter, 128—planting them and preparing the ground,
130—fummer culture of them the firft year, 137—autumn culture the
firft year, ib.—do. the fecond year, 140—do. the third year, 142—cul-
ture in their bearing ftate, 143—new mode of trimming them, 144—gene-
ral direCTIONS, 146—concerning the trimming, ib.—number of branches
to be retained, 147—when to uncover the vines in fpring, and how to
form proper heads, ib.—transplanting, 149—efpaliers the firft year, 151
—fecond do. ib.—third do. 153—fourth do. 156—direCTIONS to the
Southern Colonies, 157—Portugueze mode of culture, 159—of dung-
ing, 160—a rich manure, 161—guarding the fruit againft boys, birds
and wafps, 163—how to prevent the effects of grub-worms, &c. 164—
to be planted alone, and at what diftance, 165—bands for binding
them to the ftakes, 170. See *Vineyards*.
- (*American*) described, Vol. I. p. 192.
- Vineyards*, their importance in America, Vol. I. p. 119—productivenefs and
cultivation, 121—proper fituation, foil, and treatment, 123—manur-
ing, 124—nurseries, 125—particular vi es to be chofen, 126—method
of laying out vineyards, 131, 135—how to preferve the foil on hill
fides, 149—fite to be chofen, 150—how to gather in the vintage, 170
—art of making the wine, 171. See *Vines*.
- Virginia*, its population, Vol. III. p. 42—climate, 51—barometrical mea-
furement of the Blue-ridge, Warm-fpring and Alleghany mountains
there, Vol. IV. p. 216—other observations thereon, 222—unknown
bones found there, 246, 439—defcription of the Sand-hills of Cape-
Henry, and the natural formation of the country below the falls of its
rivers, 439—of Neptunian origin, ib. 444.
- Vocabularies*, exifting alphabets ill calculated for, Vol. III. p. 265.
- Volcano*, a fuppofed one in N. Carolina, Vol. III. p. 231.

W

- War*, interefting reflexions on, by Mr. Jefferfon, Vol. IV. p. 320.
- Waring (Wm.)* on the theory of water-mills, &c. Vol. III. p. 144—his in-
veltigation of the powers and a defcription of Barker's mill, as im-
proved by James Rumfey, 185—his continuation of the fubject of
water-mills, with an explanation of a paffage in his former communi-
cation, 319.

- Warm Spring* (Virginia) barometrical measurement of, Vol. IV. p. 216.
- Was-ist-das* described, Vol. II. p. 9, 10.
- Washington* (city of) account of the manner of laying it out, and running the 10 miles square, Vol. IV. p. 49.
- Water*, experiments on the generation of air, from Vol. IV. p. 11.
- , the difference between pure and impure, in the preservation of dead flesh, Vol. IV. p. 131.
- , why warmer or colder than land, Vol. I. p. 274—compared to a sponge, Vol. II. p. 75—experiments on the evaporation of, 118—great attraction to heat, 144.
- how to find its retarded velocity, and time of ascent into an exhausted receiver, through a tube by the assistance of the parabola, Vol. IV. p. 353.
- state of at sea, Vol. III. p. 90, 200.
- Water-mills*, on the theory of, Vol. III. p. 144, 185, 319. See *Mills*.
- rattle-snake. See *Rattle-snake*.
- *spouts*, theory of, Vol. II. p. 101—occasioned by whirlwinds, 116—a beautiful account of one, 102—curious effect of one, 116—conjectures concerning them, 335—several described, to prove that their water descends, 336.
- Wax*, not produced by the bee only, Vol. III. p. 244.
- Way of a ship*, a new invention for measuring it, Vol. III. p. 239.
- Weights* and measures, new standard for, Vol. III. p. 328.
- Wells* (*Richard*) his account of a new invented machine for pumping leaky vessels at sea, without manual labour, Vol. I. p. 289.
- Wells*, how to dissipate their vapours, Vol. III. p. 324.
- West* (*Benjamin*) his account of the transit of Venus as observed at Providence (R. I.) 1709, Vol. I. p. 97.
- Western country* of N. America, antiquities, &c. of, Vol. III. p. 214—prodigious oyster shells found there, 218—also abundance of other fossil shells, concretions, petrifications, bones, &c. ib.—prairies, 219—former height of the Mississippi, ib.—lofty rocks curiously marked, ib.
- Wheat*, destroyed by a fly weevil, with means for preventing it, Vol. I. p. 205—on the same subject, 218.
- Whip-poor-will*, some account of, Vol. IV. p. 208.
- White mountains* of N. Hampshire, described by Rev. Jeremy Belknap, Vol. II. p. 42 to 49.
- Whirlwinds*, the cause of water spouts, Vol. II. p. 111—described under the name of wind spout, 342.
- Williams* (*Rev. Dr. Samuel*) his experiments on evaporation and his meteorological observations, Vol. II. p. 118—his account of the transit of Venus, June 3, 1769, p. 246—of Mercury, Nov. 9, 1769, p. 249—his observation of a solar eclipse, Nov. 6, 1771, p. 250—his magnetic observations at Cambridge, Massachusetts, in 1785, Vol. III. p. 115.
- Williams* (*Jona.*) his communication on Captain Billings's thermometrical journal of the air and water at sea, Vol. III. p. 194—on the use of the thermometer, in discovering banks, soundings, &c. p. 82—his thermometrical journal of the temperature of the atmosphere and sea, 90—his barometrical measurement of the Blue-Ridge, Warm-Spring and Alleghany mountains in Virginia, Vol. IV. p. 216.

- Williamson (Dr. Hugh)* his account of the contacts in the transit of Venus, in 1769, Vol. I. p. 48—his determination of the sun's parallax, 78—his essay on comets, and the origin of heat, *appendix* 27—his attempt to account for the change of climate in the middle colonies, 272.
- Wilson (Rev. Matt.)* on the severity of the winter of 1779-80, Vol. III. p. 326
- Willow tree*, a great purifier of air, Vol. II. p. 209.
- Wind (Easterly)* in hot weather accounted for, Vol. II. p. 91.
- the cause of epidemic inflammatory diseases in Ireland, Vol. IV. p. 244.
- *spout* described, Vol. II. p. 342.
- Winds*, properties of the N. American, Vol. I. *pref.* p. iv.—their cause, p. 273—why the north-west less frequent than formerly, 275—prevailing ones at Cape Henry (V.) Vol. IV. p. 440.
- Winds* on L. Erie commonly resemble the sea and land breezes of the W. Indies, Vol. IV. p. 224—in what directions blown, ib.
- Wine* recommended to be made in America, Vol. I. *pref.* p. ix. 119—essay on the making and preserving it, 118—concerning white wine, 172—red do. 175—how to improve weak wines, 178—boiling the must, ib.—vessels proper to be used, 179, 180—also utensils, 195—effect of lees on wine, 180—curious and useful experiment, 185—principles of wine, 186—old Roman and other methods of preserving wine, 183, 188, 190, observations on American wine, 192.
- (*currant*) recipe for making it, Vol. I. p. 248.
- juice, yields a fine spirit, Vol. I. p. 249.
- Wisslar (Dr. Caspar,)* on evaporation in cold air, Vol. III. p. 125—his experiments on evaporation, Vol. IV. p. 72.
- Wood*, its expansion by heat, Vol. IV. p. 249.
- Woodhouse (Dr. James)* his answer to Dr. Joseph Priestley's considerations on the doctrine of phlogiston, and the decomposition of water; founded upon demonstrative experiments, Vol. IV. p. 452.
- Wool-bearing animals*, a disquisition on, Vol. IV. p. 149.
- Worm* in a horse's eye, Vol. II. p. 183.
- (*Guinea*) several yards long, Vol. II. p. 389.
- (*a jointed*), 20 inches long and near 3 in circumference, in the liver of a woman of Pennsylvania, Vol. II. p. 390.
- living in a dog, ib.
- in the human kidneys, &c. Vol. II. p. 391—fugur obnoxious to, Vol. III. p. 75.
- in the brain, ib.
- Wright (Wm.)* account of the antiseptic virtues of vegetable acid and marine salt combined, in putrid disorders, Vol. II. p. 284.
- (*Thomas*) on the mode most easily and effectually practicable of drying up the marshes of the maritime parts of N. America, Vol. IV. p. 243.

Y

Toughiogeny river, a remarkable rock and cascade near it, Vol. II. p. 50.

Z

Zanthoxylum, a tree of the southern colonies, a powerful stimulant of the glands of the mouth, Vol. I. *pref.* p. viii.
